About this catalogue

Sarabec® aims to make life a little easier for those with hearing difficulties by providing high quality products which will help them to:

- *Stay in touch with friends and relatives*
- *Know what's happening around the house*
- *Enjoy recreational time without feeling isolated*

We have nearly 40 years of experience in providing products that offer simple hearing solutions for use both with or without a hearing aid.

We aim to supply all our customers, both private individuals and companies alike, with a high quality service appropriate to their needs.

We are pleased to offer you our latest selection of products to help you with:

- *Listening - enjoy TV/Radio at a volume suitable for you and others*
- *Alerting - doorbells, telephones and alarms*
- *Telephones - Amplified corded, cordless and mobile*

Buying from Sarabec® is easier because we offer:

- *Easy ordering online or over the phone*
- *Technical help when you need it before and after sales*

Technical Help

If at any time you wish to discuss whether a product is right for you before ordering then contact us and our friendly, knowledgeable staff will be happy to help. The same people can help you to use your product after your purchase.

1 Month Trial

With our 1 Month Trial policy you can be sure that the products you choose are right for you by trying them in the comfort of your own home. If you are not happy with the product simply contact us and we will let you know the best way to return the product to obtain a refund.

We cannot give a refund if goods, when returned, are found to be damaged, incomplete or have been tampered with.

VAT relief

If you have a hearing loss and are buying for your own use you can obtain VAT relief on certain products in this catalogue. Products that are eligible for VAT relief are indicated as shown below.

VAT relief available on this product

VAT relief NOT available on this product
No ex VAT price shown

Note: *some accessories if not bought as part of a system cannot be given VAT relief.*

To obtain VAT relief you must complete a VAT Relief Certificate at the time of your order. When ordering online please tick the relevant section. If using the order form a certificate is provided at the back of this catalogue. VAT refunds cannot be given afterwards. If you are unsure, or want to know more, please contact us.

Everyday life with a Pacemaker

Pacemaker manufacturers give detailed instructions about possible sources of interference from products that you should avoid. Please refer to your booklet about your type of pacemaker. If you have any further questions about what you can and can't do, please contact your pacemaker clinic. Further information is given on our website.

Symbols used throughout this catalogue.

All products carry a 1 year warranty, those with this gold symbol have a 2 year warranty

Product suitable for users with hearing aids with the "T" or loop facility

Product with Bluetooth® connectivity technology

TV & Audio

03 Wireless TV/Audio Systems
09 Loop Systems
12 Audio/Video Accessories

These products aim to make life easier if you have difficulty in hearing your TV, Radio, hi-fi and other audio. With or without a hearing aid these systems are designed to bring the wanted sound direct to your ears without disturbing others. There are portable systems that can be easily moved from one location to another and others that require a more permanent installation.

14

Conversation

14 Personal Listeners
15 Listening Options
20 Personal Audio & Accessories

With or without a hearing aid we have products that can help you. These products aim to make life easier if you have difficulty in daily listening situations or with general conversation at home or out and about. These systems are versatile and portable using a variety of listening options to bring the sound closer to you.

23

Alerting

25 Signolux Home Alerting
31 Smoke/CO Alarms
37 Telephone Ring Indicators
39 Baby Monitors

Products make you aware of everyday occurrences in the home or at work e.g. the ringing of the telephone or doorbell, the sounding of the smoke or fire alarm or a baby crying. You will either "feel" these occurrences via a vibrating pad or "see" that these are happening via a flashing light.

42

Doorbells

42 Doorbells

A range of portable and fixed wireless doorbells, battery or mains powered, to help you not miss those important callers or parcels.

48

Clocks

48 Clocks

Getting up in the morning can be a chore for anyone, but if you have difficulty hearing the alarm your sleep may be disturbed if you are worried about sleeping in.

55

Phones

55 Mobile Phones
57 Portable/Cordless Phones
63 Desktop Corded Handset Phones
69 Telephone Amplifiers
70 Phone Accessories

Being able to use the telephone effectively is crucial to most people and in this section we offer you a selection of the best telephones along with devices which will help you to hear better what is being said.

71

Tinnitus

71 Tinnitus products

Products that may help to reduce the effects of ringing or buzzing in your ears.

TV & Audio

Digital Wireless TV Listening

TV listeners allow you to listen more clearly to your TV, Radio and other audio without any trailing wires and bring the sound directly to your ears. Digital systems use the 2.4 GHz frequency to transmit their sound from transmitter to receiver.

If friends or family complain that your TV or Radio is too loud then one of our Wireless TV/Audio Systems may prove invaluable in improving your entertainment enjoyment.

- Do you want to listen to the TV at a higher volume than other members of the family?
- One person's listening enjoyment can be a problem for everyone else!
- These wireless TV listening systems allow you to choose how loud you want the sound without disturbing others.

Wireless systems allow you the freedom to move around without the need to have wires between you and the item you want to listen to. However they all need to be connected to your TV, Radio or music etc. to pick up the sound using the leads provided.

You may find listening in a noisy situation is stressful **OR** turning the volume up on the TV or Radio is not enough **OR** you have difficulty in hearing the programmes clearly.

Your hearing aid may have the "T" (loop) facility with this you can enhance your listening by making more

of your hearing aid and choose one of the products with the T symbol. Sounds will be transmitted directly to your hearing aid's loop facility increasing intelligibility and significantly reducing background noise. Products without the T symbol are suitable for those who do not wear hearing aids.

Even with today's rapidly changing technology, we can usually help you find a solution to connect to your existing equipment with a range of items and information to help you enjoy your entertainment. The wireless listeners allow quick connection to your TV, Radio or Music device. They all require you to wear a receiver whether or not you use a hearing aid.

Digital listening systems use the **2.4GHz** frequency to transmit their sound from the transmitter to the receiver. They use a coding system that means they are unlikely to suffer any form of interference. The coding system requires the transmitter to be matched/paired to the receiver(s) required. Normally up to 4 receivers can be used with any single transmitter.

Earis - Wireless Listener

Earis - The premium TV listener. Using dynamic sound technology to deliver the highest sound quality currently available in TV listening equipment. Brilliant for people with or without hearing aids to watch TV or just listen to music. The system is easy to use and ready to connect to TV and audio systems

Through extensive research into the listening needs of hearing-impaired people it has been determined that 5 Listening Profiles match the needs of 95% of users when listening to speech and/or music from film, TV, radio or any other sound source. Earis then delivers constant high-quality sound using the chosen profile.

Earis significantly improves understanding of speech in audio even if background sounds are present, you choose which of the 5 selectable listening Profiles you prefer to create a personalised listening experience. The fast-acting Automatic Sound Profiling eradicates sudden changes in sound at the chosen listening level, which is especially useful when changing channels or when adverts cut in.

Earis receivers have a communication amplifier function, the inbuilt microphone in the Earis receiver amplifies sound in the same room, meaning it is excellent for 1 to 1 communication. Earis stores the settings of the communication amplifier. This ensures that the user always returns to the last set volume when switching over.

Earis Headset System

Transmitter, Under-chin Headset Receiver & Connection kit.

EARIS Digital Headset System	
Order code 230-190	Colour Graphite/Silver
Price £209.00 ex vat £250.80 inc vat	Size Headset : 244x112.5x24mm

Two systems are available, a Headset receiver system, and a neckloop system which you can also plug in any hearing option you like that has a standard 3.5mm jack plug, such as a headset, earphones or ear hooks

Each system uses the same transmitter which has connections and cables for digital audio and analogue audio signals, both of which are usually present on nearly all TV's and also Sky, Virgin and Freeview boxes.

The systems benefit from features such as:

- Connection kit for TV and audio systems.
- Optical digital audio lead, audio connection lead with 3.5mm stereo plugs, adapter to RCA phono plugs
- Built-in receiver charging cradle and charging port for an optional second battery
- Fast receiver battery charging - full charge in under 2 hours. 80% in 30 minutes.
- Large tactile volume wheel with LED level display.
- Easy to use communication amplifier available at the press of a button on the receiver
- Tone & Balance Controls
- Replaceable Li-Pol rechargeable battery.
- Amplification level of up to +122 dB
- Approximately 8 hours Listening time per full battery charge
- Output Connector: 3.5mm stereo jack socket, 16ohm minimum (Neckloop and PR variant only)

Earis Neckloop System

Transmitter, Plug-in Neckloop Receiver & Connection kit.

EARIS Digital Neckloop System	
Order code 230-191	Colour Graphite/Silver
Price £209.00 ex vat £250.80 inc vat	Size Receiver 63mmØ x 24mm

Sonumaxx - Digital Wireless

TV Listening

A simple to use TV listening system for both hearing aid and non hearing aid users.

With its clear sound the Sonumaxx 2.4 system will help you listen more clearly to your TV, Radio, or other sound sources without any trailing leads.

The system allows you to switch between listening to the TV sound from the transmitter to an internal microphone in the receiver which allows you to amplify conversation of people near you.

You can listen at your own volume without disturbing others. You can also move around whilst listening to TV, Radio or Hi-Fi as the signal is not interrupted by walls. The system has a range of up to 25 metres and the headset systems have an output of up to 125dB.

The systems consist of two parts, a mains powered transmitter and a receiver powered by a rechargeable battery. The transmitter picks up the sound from your TV using either the lead kit or with the supplied microphone. This sound is then sent to the receiver. The Sonumaxx systems are already paired for your convenience and avoid interference.

A fully charged battery will last up to seven hours listening time depending on volume levels used. The system is supplied with a second battery to provide continuous listening. An intelligent charging system ensures batteries will be recharged fully in less than 3 hours.

There are two types of system available, the first is our standard Headset system where the headset and receiver unit are a single device, the second type of system are called PR's. This type of system allows you to plug in any audio listening accessory into the receiver unit such as a neckloop, earhooks, direct input etc.

Sonumaxx Headset System

Transmitter and conventional underchin headset receiver

Sonumaxx 2.4 Headset System	
Order code 230-450	Colour Black/Grey

Geemarc CL7400 Wireless Headphones

The CL7400 is a stylish foldable headphone listening system. The integrated transmitter/charging station can be connected to your TV, Laptop, Audio, MP3 player or iPod. The headphone volume can be adjusted to suit your personal listening volume without the need to alter the volume of TV for others. The headphones are capable of a maximum sound output of 125dB. The system will turn off if no sound is received for more than 4 minutes. A fully charged battery can last up to 8 hours with a charge time of 6 hours for the built-in lithium battery

- A Stereo Transmitter with built-in intelligent battery charger and extra battery recharging point
- Mains power adaptor
- Foldable Headphones receiver with volume, tone and balance controls
- Stereo or mono mode
- An easy to install system that connects to a wide variety to today's audio systems
- A lead kit to directly connect the transmitter to your TV or audio equipment with phono or 3.5mm

Geemarc CL7400 Wireless Headphones

Order code **252-213**
Price **£116.66 ex vat**
£139.99 inc vat

Colour **Silver/Black**
Size **Base: 205x130x75mm**
Headset: 190x160x65mm

Bluetooth Personal Listening

Bluetooth technology for short range wireless communication and listening.

Bluetooth® is an easy to use short-range wireless communications technology now found worldwide in millions of products that we use every day - including headsets, smartphones, laptops and portable speakers. Bluetooth devices radiate much less power than a mobile phone and typically have a useful range for most devices between 5 and 10metres.

Bluetooth® is a secure system that allows you to enjoy sound that is free of interference, and the distractions of background noise.

Bluetooth® is increasingly being used to connect hearing aids to other devices. Hearing aid streamers often use Bluetooth to connect to phones or TV Bluetooth transmitters and then send those signals to the hearing aid by the aid's own radio system or loop program. A few hearing aids have built-in Bluetooth receivers.

Bluetooth neckloops are universal receivers, and unlike streamers, can be used with any hearing aid that has a loop or "T" program. So, if you change the brand of hearing aid you won't need a new streamer. They can be paired with mobile phones and any other device that has a blue tooth output.

Bluetooth neckloops allow you to freely move around whilst connected to your mobile phone even if sitting on your desk, left on the couch or in a bag. They enable discreet conversation without using handsfree mode.

As the technology improves more than one device can be connected (paired) with the Bluetooth receiver, so switching between a phone and TV becomes easier.

With the introduction of each new version of Bluetooth, currently version 5.0, there are improvements to the delays that may be experienced to receiving sound, lip-sync, and more importantly the power required to run the receivers.

CM-BT2 Bluetooth Neckloop

Keep your hands free whilst making and answering phone calls. CMBT2 uses short range Bluetooth wireless technology giving you a wireless connection between your Bluetooth enabled phone and your hearing aid via the loop setting. Although primarily designed for use with mobile phones there are plenty of other devices you can now communicate with using a Bluetooth neckloop.

The sound is received by the CM-BT2 and transmitted direct to the loop receiver in your hearing aid. You can control the volume of the loop directly on the receiver. A built-in microphone allows full two way communication.

- Power Supply and Car Charger
- 3.5mm Socket to listen through other accessories

CM-BT2 Bluetooth Neckloop

Order code **230-004**
Price **£79.99 ex vat**
£95.99 inc vat

Colour **Black/Blue**
Size **48x76mm**

Artone 3 Max Bluetooth Loopset

Artone 3 MAX streamer is the most powerful bluetooth neckloop on the market, it works even for those with severe hearing loss and cochlear implants.

You will not need Bluetooth hearing aids. This will connect your Bluetooth devices to a standard loop enabled hearing aid.

When using the Artone 3 Max your loop enabled hearing aid will now have Bluetooth connectivity, this will allow the user to communicate using a mobile phone as a handsfree device. You would also be able to listen to other Bluetooth devices for music and TV hands and wire free.

Artone 3 Max Bluetooth Loopset

Order code **233-005**
Price **£99.99 ex vat**
£119.99 inc vat

Colour **Black**
Size **45x30x15mm**

Artone MIC Wireless Bluetooth Microphone

A wireless microphone that connects to your Artone Bluetooth Loopset. It will help you to hear the sounds you were missing until now.

The wireless microphone can be used by someone speaking at a distance from you and where there is background noise.

- Stereo frequency range - A2D2
- Microphone sensitivity control
- Direct Audio Input option
- Rechargeable
- Compatible with Artone MS, Artone 3, Artone 3 MAX
- Microphone with USB charging cable
- Tie clip microphone
- 10cm 3.5mm jack to jack lead

Artone MIC Wireless Bluetooth Microphone

Order code **233-020**
Price **£79.00 ex vat**
£94.80 inc vat

Colour **Black/Silver**
Size **50x15x10mm**

Artone TVB TV Transmitter (Optical)

The TVB transmitter only works in conjunction with the Artone 3 Max.

If you can hear the TV but with all the background noise of your surroundings - use TVB with the Artone 3 Max. It will transfer the sound from your TV direct to your loop enabled hearing aid without interference.

- Transmitter with USB power cable
- Optical Audio Lead
- 10cm 3.5mm jack to jack lead
- 3.5mm - 2 x phono adapter

Artone TVB TV Transmitter (Optical)

Order code **233-022**
Price **£49.00 ex vat**
£58.80 inc vat

Colour **Black/Silver**
Size **60x60x20mm**

TV & Audio

Induction Loop Systems

Induction loop systems transmit sound directly to a hearing aid's loop ("T") facility built into most hearing aids.

The main advantage of using the loop facility is that it can minimise the distracting effect of background noise and so enhance the sounds you want to hear making them easier to understand.

Because the loop receiver facility is built into your hearing aid you will not need to wear an additional receiver.

The principle of a loop system is a bit like radio. A transmitter sends the sound direct to your hearing aid which has a built-in receiver known as the loop facility. Hearing aids with this facility are often referred to as having a telecoil fitted in them.

Loop systems come in many sizes. From a personal loop worn around the neck or close to the ear, room loops for the home or office meeting room through to churches, cinemas and theatres even football stadiums have looped areas. If you have the loop facility in your hearing aid you can benefit at home, work or entertainment venue.

You may find that your hearing aid is perfectly suited to your hearing loss in a one to one situation but when the person you want to hear gets further away or there are many people speaking at once you find it difficult to discriminate between the person you want to hear and other people.

Loop systems in their many different forms help to bridge the gap between you and the talker by

bringing their speech directly to your ears.

Some users find that whilst benefiting from the sound of the TV, for instance, being transmitted directly to their hearing aid they feel cut off from other useful sounds like the doorbell or being able to hear their partner. This can be overcome by asking for an

additional program where the loop and microphone are mixed together. This used to be known as "MT"

We would recommend that most hearing aid users ask for both the "T" and "MT" programs to be activated. This enables you to benefit at home from being able to listen to TV at a volume suitable for all the household by using the "MT" program while not missing the doorbell or listening to your partner. However, if going to the bank, theatre, cinema or church using the "T" facility will enable you to hear just what you want to hear either the film or performance and not the noises near to you.

Ask your audiologist if you are not clear how to use the loop features of your hearing aid or you need it activating. Sometimes the sensitivity of the loop program may need adjusting, again consult your audiologist.

LA240 Loop Systems

A Room Loop System designed for use in a living room or lounge. It will help you make more use of your hearing aid.

Using the loop ("T") program the loop system will effectively bring the wanted sounds closer to you and minimise background noise. You will be able to move around the room without wearing any additional devices whilst listening to your TV, radio etc. The major advantage of a loop system over other TV systems is that once the system is set up all you will ever have to do after that is switch the TV on and switch your hearing aid to the loop ("T") program.

The volume of your TV can be set at a level that is comfortable for other listeners whilst you can adjust your own sound level with the volume control on the loop amplifier.

By directly connecting your loop amplifier to your TV you will cut out background sounds. However, you will still be able to hear your doorbell, telephone ring or conversation by using the microphone supplied with the system and hear them through the loop

This loop amplifier allows you to directly connect to several pieces of equipment at the same time, for instance your TV and Hi-Fi. You can quickly select which one you want to listen to at the touch of a button.

A compact alternative for an individual to the room loop cable is the loop pad. Instead of running the loop cable around the room simply place the loop pad under or behind a chair cushion and connect it to the amplifier and you are ready to receive in your favourite chair.

The Room Loop System is a complete, easy to install mains powered system. The supplied loop cable is run around the edge of the room and connected to the Loop Amplifier.

Alternatively you may use a loop pad placed under a chair cushion or across the chair back. This can be suitable for a single person or where a limited loop field is required.

The amplifier transmits the sound from your TV directly to your hearing aid when switched to the "T" position. The sound from your TV is picked up by the Loop Amplifier via a direct connection lead, whilst an additional microphone can be used for other sounds.

The loop signal is then transmitted via the loop wire or pad "the aerial" to the telecoil in the hearing aid.

The Room Loop System requires no technical knowledge to install. It is easy to install and operates with any TV or other audio equipment. Simply run the loop cable from the amplifier around the edge of the room and back to the amplifier as illustrated. The loop cable is only a single core wire. Cable clips are supplied to allow you to fix it to the skirting board. When you come to a doorway either go up and round it or go under the carpet it doesn't matter as long as you go round the room. Tuck the loop cable out of the way under the edge of your carpet or run it around your skirting board or picture rail and plug it into the back of the Loop Amplifier.

The compact amplifier features:

- On/off switch with "on" indicator
- Rotary volume and tone controls
- Digital Audio Inputs (TOSLink & S/PDIF)
- Input selector to switch between TV and other audio equipment
- Exceptional clarity with wide ranging tone control
- Microphone inputs with priority feature
- Automatic gain control (AGC) - protects against sudden increases in volume
- Coverage with standard cable up to 70m² with a maximum room width of 6.5m
- A red loop level LED indicator and blue LED power and input indicators

TV & Audio

LA240 Room Loop System UK

- LA240 Amplifier
- 40 metres (approx 130ft) of thin, white loop cable (2.5mm diameter) and cable clips
- Lead kit to connect your amplifier directly to your TV with Digital Optical, phono and jack connectors
- 1 microphone with a 1.2m lead (can be used for conversation or monitoring the telephone or doorbell ring)

Personal Listeners

If you have difficulty catching everything that is said in conversation you may benefit from using one of our Personal Listeners which amplify the sounds you want to hear and bring them closer to your ears.

Sarabec® audio products provide clear, sharp sound reproduction leading to relaxed, stress free listening. There are many uses for these versatile products, including connecting directly to various types of audio/ visual equipment.

You can use a personal listener during the day for conversation with friends or at work where you may find listening in a group or noisy situation to be stressful. You can then later in the day use it to relax and listen to TV, Radio, Music device or your computer.

You choose the way you want to listen, for instance with headphones, headset or earphones or by using your hearing aid on the "T" setting or loop program with a neck loop or ear hook. Your hearing aid may have the "T" (loop) facility.

With this you can enhance your listening by making more of your hearing aid.

Sounds will be transmitted directly to your hearing aid significantly reducing background noise.

Conversation

Listening options

These may be used in conjunction with Crescendo, Heartl and with some Introsion and SWING models. They may also be used independently with other pieces of equipment with a suitable headphone socket for example your iPod or even with the phoneplus telephone amplifier.

Headset

Designed to be worn under the chin. Lightweight and comfortable, these are the most popular headsets giving the loudest output. They are suitable for a mild to moderate hearing loss. They have rubber ear tips that are very soft and comfortable to wear. These ear tips are washable and can be renewed.

Headphones

Traditional style lightweight over the head headphones with an adjustable headband. Suitable for mild to moderate hearing loss.

Can also be worn over hearing aids and use either the microphone or loop facility.

Ear phones

Modern in-ear earphones designed to be lightweight, comfortable and discreet they have the same mini loudspeakers as the headset.

They are supplied with clear silicone ear moulds to help them stay in your ears and seal so that feedback can be reduced.

Suitable for a mild to moderate hearing loss.

Neckloop

If your hearing aid has the "T" or loop facility then you can make more of your hearing aid and its personalised settings by using a loop. The neck loop is a personal loop worn around the neck and transmits the sound directly to your hearing aid when switched to "T" or loop.

Ear hook

An ear hook or ear loop has a very small loop built into a hook similar to the shape of a behind the ear hearing aid. It is extremely thin and comfortable to wear. It is often found to be more discreet than a neckloop. Mono and Stereo versions are available. For those with two hearing aids the stereo version would be used. These ear hooks can be used independently with mobile phones and MP3 players.

Crescendo 60

The Crescendo 60 Personal Listener will amplify the sound from your television, radio or conversation.

The Crescendo 60 will allow you to listen at a volume that is comfortable for you. There is now no need to have the television or radio volume at a level that will disturb your family, friends or neighbours. It will allow you to take part in a conversation with confidence.

The Crescendo Personal Listener is a portable listener which is light and comfortable to use. For conversation use the plug-in microphone to pick up the sound. For use with a TV or radio either a microphone or direct connection lead is used to pick up the sound.

The Crescendo Personal Listener requires no technical knowledge to assemble, simply plug the accessories into the appropriate sockets and it is ready to use.

The range of systems listed allows you to choose a complete ready to use system especially suited to your needs.

- A highly effective rotary volume control
- A rotary tone control (to boost either high or low tones)
- An indicator "on" light with a low battery warning
- Mode selection (Microphone, Direct input & Loop Pickup)
- 2 AA alkaline batteries (supplied) for up to 60 hours use
- Belt clip & Neck cord
- A plug-in microphone for one to one communication. An additional microphone with 1.2m lead and tie-clip is supplied should you need to place the microphone nearer to what you need to listen to. Velcro pads for attaching the additional microphone to a loudspeaker grille.
- A 3m extension for either microphone or listening option.

Crescendo 60/1 system

CM-BT2 Bluetooth Neckloop

Keep your hands free whilst making and answering phone calls. CMBT2 uses short range Bluetooth wireless technology giving you a wireless connection between your Bluetooth enabled phone and your hearing aid via the loop setting. Although primarily designed for use with mobile phones there are plenty of other devices you can now communicate with using a Bluetooth neckloop.

The sound is received by the CM-BT2 and transmitted direct to the loop receiver in your hearing aid. You can control the volume of the loop directly on the receiver. A built-in microphone allows full two way communication.

- Power Supply and Car Charger
- 3.5mm Socket to listen through other accessories

CM-BT2 Bluetooth Neckloop

Order code **230-004**
Price **£79.99 ex vat**
£95.99 inc vat

Colour **Back/Blue**
Size **48x76mm**

Artone 3 Max Bluetooth Loopset

Artone 3 MAX streamer is the most powerful bluetooth neckloop on the market, it works even for those with severe hearing loss and cochlear implants.

You will not need Bluetooth hearing aids. This will connect your Bluetooth devices to a standard loop enabled hearing aid.

When using the Artone 3 Max your loop enabled hearing aid will now have Bluetooth connectivity, this will allow the user to communicate using a mobile phone as a handsfree device. You would also be able to listen to other Bluetooth devices for music and TV hands and wire free.

Artone 3 Max Bluetooth Loopset

Order code **233-005**
Price **£99.99 ex vat**
£119.99 inc vat

Colour **Black**
Size **45x30x15mm**

Artone MIC Wireless Bluetooth Microphone

A wireless microphone that connects to your Artone Bluetooth Loopset. It will help you to hear the sounds you were missing until now.

The wireless microphone can be used by someone speaking at a distance from you and where there is background noise.

- Stereo frequency range - A2D2
- Microphone sensitivity control
- Direct Audio Input option
- Rechargeable
- Compatible with Artone MS, Artone 3, Artone 3 MAX
- Microphone with USB charging cable
- Tie clip microphone
- 10cm 3.5mm jack to jack lead

Price	£49.00 ex vat £58.80 inc vat
Colour	Black/Silver
Size	60x60x20mm

Personal Audio & Accessories

Our range of Listening accessories for use with the systems we supply, and systems we have supplied in the past.

You may not need an amplifying system, just by using one of these accessories you might find that you can improve your entertainment enjoyment by plugging one of these items directly into your own equipment.

In general you can use any of these accessories where there is a suitable headphone output. Although you may not get the same power out of your own equipment compared with one of our full systems it may become loud enough for you to use more comfortably.

Using any of these products with or without a hearing aid will help bring the sound closer to you and reduce background noise. The products for hearing aid users transmit the sound inductively directly to the hearing aid so cutting out background noise.

The issue you may have is that some of the small MP3 players do not have enough output to drive a neck loop. If you want to use your hearing aid's loop program then we would recommend the Ear Hooks as these give excellent reproduction.

If you have two hearing aids and use the stereo Ear Hook then if your MP3 player has stereo output you will hear in Stereo, unlike a Neck Loop which only transmits in Mono.

For these items, headphone extension leads can be used to extend the distance between you and the audio equipment.

Headsets & Headphones

Stethoscope Headset HS7

Designed to be worn under the chin. Lightweight and comfortable, these are the most popular headsets giving the loudest output. They are suitable for a mild to moderate hearing loss.

They have rubber ear tips that are very soft and comfortable to wear. These ear tips are washable and can be renewed.

Alerting

Wi-Safe[®] 2 from FireAngel[®]

HOME SAFETY SOLUTIONS FOR THE HEARING IMPAIRED

The new generation of FireAngel Wi-Safe2 interlinked safety products provide the ultimate in early warning to escape the dangers of fire and carbon monoxide.

In order to protect vulnerable groups or homeowners with specific needs from the dangers of fire and carbon monoxide (CO) poisoning, the Wi-Safe2 range from FireAngel is the ultimate cost-effective solution.

The Wi-Safe2 range incorporates heat, smoke and carbon monoxide alarm detectors which send wireless signals not only amongst themselves but to any combination of Flashing Strobe with Vibrating Pad and / or Loud Low Frequency Sounder.

These will alert the homeowner to a potential fire or carbon monoxide incident.

The Wi-Safe2 products can be tailored to suit individual needs thus ideal for people with hearing impairments, and the disabled who may have reduced capacity to be alerted to danger within their home and escape in time.

Due to their wireless operation FireAngel's Wi-Safe2 products do not require costly or disruptive wiring in the home.

Alarms are battery operated so are quick and easy to install. Wi-Safe2 ensures homeowners feel safe from danger and can live independently within their home to improve their quality of life.

- Wireless products that are quick and easy to install
- Unique coding system to avoid any false alarms from neighbouring properties
- Wi-Safe2 product range can be tailored to suit needs
- Provides early warning to fire and carbon monoxide
- Improves the quality of life of homeowners

The Wi-Safe2 intelligent technology creates a network of all the installed units in the home. These units all communicate at all times with each other.

- When ANY alarm detects an emergency and sounds - ALL alarms and receivers will sound and indicate an emergency.

The intelligent locate feature means that on activation, pressing the test/reset button on any alarm or receiver will silence all but the initiating alarm.

Should a failure of your network occur then a fault condition will be shown on either the strobe or loud sounder receivers.

Alerting - Telling you what's happening

Recommended product positioning

Smoke Alarm

Landing / Hallway, Bedroom, Living Room
Minimum of one alarm should be installed on every floor of your home

Heat Alarm

Kitchen, Garage, Loft

CO Alarm

Kitchen, Living Room, Bedroom, Boiler Room
One alarm should be installed in every room containing a fuel-burning appliance

Alerting

Signolux Home Alerting

A versatile and effective alerting system with many features found on more expensive systems making it especially suitable for deaf and hard of hearing people alike. A simple, efficient and cost effective system for people wanting peace of mind.

Wherever sounds happen around the home you can be made aware that an event needs your attention.

The receivers will alert you via a combination of loud sound, visual indications and/or vibrations.

In its basic form, this sophisticated system uses just two universal transmitters to keep installation as simple as possible:

An Audio Transmitter that uses microphones to detect sounds.

A Direct transmitter that can be connected to existing devices around the house.

Signolux Systems

Complete Signolux systems to suit various scenarios

Including transmitters, receivers, accessories and batteries to allow you to be alerted events in the home.

Signolux Visual Signal System with Vibrating Pad

As per Visual Signal System plus Vibrating pad with 1.5m lead.

Dedicated alerts are included for person-to-person, bell push and smoke alarm Features and Benefits:

- Receiver system with either loud sounds or bright white flashing light and coloured indicators or vibrations
- Receivers have either 6 or 8 coloured icons to visually identify the source of the sound
- System receiver with choice of 15 CD quality loud sounds up to 90dB output
- Wirefree; uses 868 MHz radio frequency to send and receive system signals with secure coding system to avoid interference from neighbouring systems
- Operating range of up to 200m*
- Wall mountable receivers and transmitters
- Portable pocket or clip-on vibrating receiver
- Plug-in mains powered strobe receiver
- Easy wireless installation between transmitters and receivers
- Up to 8 transmitters can be coded to each icon with a choice of 15 sounds
- Additional receivers and transmitters can be added to your system as required
- All receivers can have the addition of a vibrating pad, separate strobe or loud sound alert
- Battery operated with mains adaptor option
- All batteries are included with the kits where necessary
- * Max range between push and chime. Note: Building structures, e.g. metal and thick walls may affect transmission range

Signolux Transmitters

Dedicated transmitters for the Signolux Alerting System

These transmitters are the starting point to building a Signolux alerting system, simply choose which events you need to be alerted to such as doorbell, baby crying or telephone, multiple transmitters can be used together with one or more receiver.

Signolux Direct/Phone Universal Transmitter

This universal transmitter directly connects to a range of sound sources and transmit a signal to signolux receivers in range.

The Signolux Direct/Phone Universal Transmitter can be used to alert the user to the telephone ringing (by plugging into a BT socket), can be used to wire into an existing hardwired doorbell system, alarm panel or water level indication.

Two further connection sockets are provided; one for connection to alarm systems or low voltage doorbell systems and the other for alarm accessories. Leads are supplied with this transmitter for connection to a BT Socket, and also a length of wire for connection to alarm panels etc

- 3m BT line cord
- 1m lead
- 3 x AAA batteries

Signolux Direct/Phone Universal Transmitter			
Order code	230-721	Colour	Black/Silver
Price	£28.99 ex vat £34.79 inc vat	Size	122x75x38mm

Signolux Audio Universal Transmitter

The audio universal transmitter will pick up sounds from different sources and transmit a signal to signolux receivers in range.

The main function is to monitor existing doorbells or door intercom systems. A disc sound sensor is included to make this audio connection you can also use this transmitter with our standard electret microphones to monitor other sounds such as a baby crying.

- Disc sensor
- 1.5m lead
- 3 AAA batteries

Signolux Audio Universal Transmitter			
Order code	230-720	Colour	Black/Silver
Price	£28.99 ex vat £34.79 inc vat	Size	122x75x38mm

Signolux Baby Monitor Audio Transmitter

The Signolux Baby Monitor Audio Transmitter can be used to pick up audio signals from a baby crying, and has a sensitivity control, so you can set it to the strength of your baby's cry. This transmitter sends a radio signal to any signolux receiver which can alert you through audio, visual and vibration signals.

- Audio Transmitter.
- Power Supply.
- Plug-In microphone.

Price	£37.99 ex vat £45.59 inc vat	Size	122x75x38mm

Alerting

Signalux Guardion Smoke Detector

The Signalux Guardion Smoke Detector operates as a standard smoke alarm but also integrates seamlessly with the Signalux alerting system, upon detecting smoke it will send an alarm signal to all active Signalux Receivers in range.

This means that a user may be alerted by Loud sounds, visual indication and Vibrations.

Signalux Guardion Smoke Detector	
Order code	230-724
Price	£102.99 ex vat £123.59 inc vat
Colour	White
Size	95mmØx45mm

Signalux Alarmo Detector

There is no need to replace your smoke alarm because alarmo can detect the alarm sounds from existing smoke alarms without the need for any modification or wiring.

It incorporates a highly intelligent processor to listen just for a typical smoke alarm sounding and so is extremely good at not creating false alerts. When an independent alarm is detected alarmo transmits a radio signal to all signalux receivers within range, which will then alert you to the event. This unit is mains Powered but has the benefit of battery backup.

Signalux Alarmo Detector	
Order code	230-726
Price	£99.99 ex vat £119.99 inc vat
Colour	Silver
Size	135x90x65mm

Signalux Sound Monitor Transmitter

The Signalux soundmonitor is capable of learning and recognising up to three different sounds. Teaching the sounds is easily done by three buttons on the top of the device. The only condition is that these sounds are exactly repeatable, they must not be different to the sound which was taught.

The sound monitor sends the according alert to all active Signalux receivers within range, which will in turn indicate these in visual, audio or as vibrations. It is possible to reprogram the device at any time.

This makes it possible to expand the functionality of the Signalux alerting system by 3 individually defined sound sources, such as tones from timers, specific ringtones or alarm sounds of sensors such as CO2-detectors and smoke alarms.

Signalux Sound Monitor Transmitter	
Order code	230-718
Price	£99.99 ex vat £119.99 inc vat

Signolux System Gateway (for Mobile Phones)

Signolux Gateway for smartphones. Signolux events are displayed on your smartphone wherever you are.

The Gateway establishes a connection between your signolux alerting system and a router, which then feeds the alerts into the mobile networks. All signolux alerts can then be received practically anywhere at any time as long as you have a mobile data connection.

The Humantechnik app (Humantechnik:Alert) for Apple iPhone and Android is available through the app stores, free of charge.

Any amount of apps can be linked to a single Gateway device, which makes it possible for a whole family to link up with the Gateway device installed in their home.

Signolux DS2 Alarm Clock

The DS2 will provide a single point on the bedside table that will receive all different types of signals from the system and alert to whatever is going on. The DS2 provides connectors to connect to any of the Signolux receiver alerts to enhance your alerting needs.

Just one piece of equipment for all alerting needs; telephone, door, smoke and alarm clock. It provides night time coverage and will alert you to any alerts in the home, it utilises intelligent digital technology, offering a wide range of waking methods. A particularly powerful sound generator and the exceptionally bright row of flashing LED's are built in.

- Large, easily discernible illuminated digits for time and alarm time display
- Unmissable acoustic alarm signal, the alarm tone pitch and volume are adjustable
- Visual alarm with a row of flashing LEDs
- Snooze-function
- Display brightness adjusts automatically to its environment
- 12 or 24 hour time display
- Back-up against power failure (4 x AAA batteries not supplied)
- 3.5mm socket for additional alerts

Signolux Smoke Alarms

The Signolux smoke alarm transmitter and other alarm transmitters can be paired to single or multiple signolux receivers.

This will provide you with day and night time coverage should a smoke alarm trigger in your home.

Signolux Guardian Smoke Detector

The Signolux Guardian Smoke Detector operates as a standard smoke alarm but also integrates seamlessly with the Signolux alerting system, upon detecting smoke it will send an alarm signal to all active Signolux Receivers in range.

This means that a user may be alerted by Loud sounds, visual indication and Vibrations.

Signolux Guardian Smoke Detector	
Order code	230-724
Price	£99.99 ex vat £119.99 inc vat
Colour	White
Size	95mmØx45mm

Signolux Alarmo Detector

There is no need to replace your smoke alarm because alarmo can detect the alarm sounds from existing smoke alarms without the need for any modification or wiring.

It incorporates a highly intelligent processor to listen just for a typical smoke alarm sounding and so is extremely good at not creating false alerts. When an independent alarm is detected alarmo transmits a radio signal to all signolux receivers within range, which will then alert you to the event. This unit is mains Powered but has the benefit of battery backup.

Signolux Guardian Smoke Detector	
Order code	230-726
Price	£102.99 ex vat £123.59 inc vat
Colour	Silver
Size	135x90x65mm

Signolux Sound Monitor Transmitter

The Signolux soundmonitor is capable of learning and recognising up to three different sounds. Teaching the sounds is easily done by three buttons on the top of the device. The only condition is that these sounds are exactly repeatable, they must not be different to the sound which was taught.

The sound monitor sends the according alert to all active Signolux receivers within range, which will in turn indicate these in visual, audio or as vibrations. It is possible to reprogram the device at any time.

This makes it possible to expand the functionality of the Signolux alerting system by 3 individually defined sound sources, such as tones from timers, specific ringtones or alarm sounds of sensors such as CO2-detectors and smoke alarms.

Signolux Sound Monitor Transmitter	
Order code	230-718
Price	£99.99 ex vat £119.99 inc vat
Colour	Black/Grey
Size	122x75x38mm

Alerting

Signolux Audio Universal Transmitter

The audio universal transmitter will pick up sounds from different sources and transmit a signal to signolux receivers in range.

The main function is to monitor existing doorbells or door intercom systems. A disc sound sensor is included to make this audio connection you can also use this transmitter with our standard electret microphones to monitor other sounds such as a baby crying.

- Disc sensor
- 1.5m lead
- 3 AAA batteries

Telephone Ring Indicators

Telephone Ring Indicators from Sarabec help to ensure you don't miss that important phone call because you could not hear the phone ringing.

Our indicators alert users through loud sounds, flashing lights, or a combination of both, as well as vibrating pads.

Flashing and vibrating Telephone Ring Indicators are ideal for use in an office environment where quiet is essential, and all models are well suited to home use, giving you greater flexibility.

iBell2 Black Mobile Phone Alert

iBell2 will show that your mobile phone is ringing with white running lights. The iBell2 is triggered by the vibration of the mobile phone.

Suitable for all mobile phones with a vibrating option. The vibration alert must be set on for all incoming calls and messages. The iBell2 can also be connected to an optional vibrating pad or a Signolux system.

Baby Monitors

Baby Monitors from Sarabec have bright flashing lights and adjustable volume settings, making them perfect for use by people who find it difficult to hear conventional baby alarms.

MONA Baby Monitor System with Vibrating Pad

The Mona Baby Alarm system is a portable video receiving system.

It is made up of three parts, the first is the video receiver which is rechargeable and comes with a charging cradle. The receiver can be carried around the house and the charging cradle left on a bedside table.

The second part is the baby monitor transmitter, this is a wireless infrared camera which also reacts to sound, this part is placed in baby's room.

The third aspect of this system is the Vibrating Pad, it is left plugged into the video receiver charging cradle, and will vibrate every time there is an alert (Baby Crying) while the video receiver is placed on the cradle.

iLuv Smartshaker 2 - Black

Set up to 10 alarms with the easy-to-use app (iOS and Android). Multiple alarm options: wake up to vibration, alarm tone, or both.

Connects to your smartphone via Bluetooth.

Set it and forget it - works independently without your phone once the alarm is set. Long battery life lasts up to a month of usage before needing to recharge.

Great for couples, heavy sleepers and people with hearing impairments. Small and thin enough to fit under a pillow. Setup is simple and takes only a few seconds.

Vibrates three times stronger than an iPhones alarm. Light weight and small so you dont feel it in your sleep

Portable Cordless Telephones

Portable, Cordless or DECT phones allow you the freedom to have a phone anywhere in your home or garden.

Many of these phones have good amplification and tone controls. Some have an answer machine built in that you can access through the handset and benefit from the amplification. They can be increasingly used with hearing aids without interference.

BT 4600 Big Button

BT Big Button 4600 Cordless Telephone with Answer Machine with premium nuisance call blocking powered by trueCall's award winning technology, allows you to block 100% of nuisance calls. The big buttons make dialling and keying in information simple, whilst the inbuilt answer machine will record all your messages, ideal if you can't take the call.

The BT 4600 advanced call blocker, powered by truecall's award winning technology, offers complete control over which calls you wish to take. Introducing bt's new hot key to block up to 100% of nuisance calls. Block up to 1000 numbers or block calls by type.

- Hearing aid compatible.
- 200 name and number memories.
- 15 ringtones.
- Last number redial.
- Caller ID.
- Hands-free facility.

Most systems can be expanded to accommodate multiple handsets, the extra handsets known as satellites do not need to be plugged into the telephone socket, their base simply plugs into the mains power and receives its telephone signal from the main base unit.

- Speaker and ringer volume control.
- Hearing aid compatible.
- Up to 16/ hours talktime/180 hours standby.
- Up to 50m indoor range/300m outdoor range.
- Answering machine
- Nuisance call blocking.
- Personalised recording facility.

Phones

Desktop Corded Telephones

All the telephones here have variable amplification and most have a tone control.

With the help of variable amplification using the telephone can be become less frustrating. However, just increasing the volume doesn't always help. Most hearing loss is not equal across the different frequencies and so a tone control is extremely useful when trying to improve clarity to boost the frequencies that are being lost. This leads to a greater understanding of the person you are having a conversation with. Using both volume and tone together will give the most help.

Most of the landline corded telephones on our website have an inductive coupler in the handset that can be used in conjunction with a hearing aid that has the 'T' or 'Loop' facility. If phones have this facility they are listed as 'Hearing Aid Compatible' (HAC)

Amplicomms PowerTel 46

CM-BT2 Bluetooth Neckloop

Keep your hands free whilst making and answering phone calls. CMBT2 uses short range Bluetooth wireless technology giving you a wireless connection between your Bluetooth enabled phone and your hearing aid via the loop setting. Although primarily designed for use with mobile phones there are plenty of other devices you can now communicate with using a Bluetooth neckloop.

The sound is received by the CM-BT2 and transmitted direct to the loop receiver in your hearing aid. You can control the volume of the loop directly on the receiver. A built-in microphone allows full two way communication.

- Power Supply and Car Charger
- 3.5mm Socket to listen through other accessories

Sound Oasis Sound Relaxer S-550

This compact and attractive sound therapy system has a choice of 6 high quality sounds plus the option to purchase additional sound cards. Very simple to use, the S-550 Classic is very similar to the S-650 Style but without the alarm clock function & digital display.

The Sound Oasis Classic incorporates a multi-position timer (with 4 selections: continuous, 30, 60, and 90 minutes), a unique "gradual off" volume reduction feature for a peaceful decrease in sound volume, a rotary on/off volume control, headphone jack and a one-touch off/resume button that stops the unit or repeats your last played sequence.

An omni directional reflective speaker projects sound from the back of the unit for rich, deep sound. Can be used upright, on it's back or mounted to a wall.

- Plays 6 authentic, high fidelity built-in nature sounds: Ocean Surf, Stream, Rain, White Noise, Summer Night & Wind.
- World's only sound card technology for changing sound themes.
- State-of-the-art digital playback technology for the most realistic sounds.
- Multi position timer: continuous, 30, 60, 90 min. plus continuous with gentle off.
- Memory button replays last sound
- Rotary on/off volume control
- 3.5mm headphone/Sleep pillow jack.

Large Area Listening

We can work with you to improve communication for Hearing Impaired people throughout various non-domestic environments

There are systems to meet the continually varying needs of customers to be compliant with current legislation in order to provide quality audio services for providers, clients and users.

Applications include reception areas, conference and meeting rooms; courtrooms; lecture theatres; churches; multilingual simultaneous translation; tour guides; auditoriums; multimedia rooms and theatres.

We can specify and design a system to fit exactly with your requirements and type of building, and through our Loop System Design package we can deliver a full supply, install, and aftercare package. We can work with you to improve communication for Hearing Impaired people throughout various community settings.

The main advantage for all systems is that the sound is delivered to the listeners in a pure, undistorted form that is not influenced by the distance of the listeners to the sound source or by any annoying background noise in the room.

In order to ensure that any listening system is effective, it is important to compare the requirements of the venue and its architectural features such that the properties of the chosen transmission system is not in conflict with its surroundings. Site visits and assessments are frequently an important part of any pre-installation for a new or upgrading venue.

The key to all these transmission systems though is their input from an audio source - microphone, one or many, or a public address system. If the quality of the input is not at its best, then the output will not be satisfactory.

An induction loop system consists of a loop of wire around the required listening area, an amplifier and microphone or other input. The loop, an insulated wire, runs around the outside of the listening area. The amplifier transmits the required audio signals as an alternating current into the loop. A magnetic field of audio sound is then created inside the loop allowing listeners with the loop facility on their hearing aids to move freely in the room and receive the audio signals directly into their hearing aids without unwanted sounds.

Please contact us if you have a project in mind and would like further information or help with system or help with system design, Installation, Commissioning and Training.

Ordering Information

You can view and order all of our products online at www.sarabec.com 24 hours a day 7 days a week. We use a secure ordering system to ensure the safety of your details.

If you wish to place your order by post or fax simply tear out the order form overleaf and complete it with the details (product code, price and quantity) of the products you require.

- If you are eligible for VAT relief, then, for each product required you only pay the price excluding VAT. You will need to complete the VAT relief certificate on the back of the order form.
- If a VAT exclusive price is not quoted for the product then the price including VAT must be paid.
- If paying by VISA, Mastercard, Maestro or AMEX please complete the credit/debit card payment details.
- Post or fax your order to us.

OR

- If paying by cheque, make it payable to 'Sarabec Ltd'. Enclose your payment with this order and post to us. Please note that cheques are cleared before goods are sent.

VAT

Throughout this catalogue you will find products that are priced inclusive (inc VAT) and exclusive (ex VAT) of VAT. VAT relief is not available on postage and packing.

In the description of each product where we detail prices including and excluding VAT, that product is eligible for VAT relief. If an exclusive price is not shown, VAT relief is not available.

You are entitled to VAT relief if you are handicapped by a hearing disability. To benefit, simply complete the VAT Relief Certificate. If you are unable to make this declaration, you must include the VAT in your order.

Payment

You can pay by using a cheque or postal order payable to SARABEC Ltd or by using a credit card or debit card. If you wish to use a credit or debit card you may place your order and pay online via secure payment services or direct by telephone, fax or textphone.

Trial Period

All products carry a 1-month trial period if purchased within the United Kingdom. You may return your products to us for any reason within 1 month of receipt and obtain a refund for your purchase provided that:

- You contact us first to let us know why you are returning the product
- The products are returned in good condition and in their original packaging; we may charge if products have been misused.
- The products have been used in accordance with the product instructions.

The cost of returning any product is your responsibility. We cannot accept responsibility for loss or damage to goods until they arrive safely at our offices. We advise you to return goods adequately packed and covered by insurance where appropriate.

Delivery

Products are normally available from stock and are despatched within 48 hours of receipt of your order. Delivery to UK mainland addresses normally takes up to 3 working days from receipt of your order by us. Delivery is made through Royal Mail or independent carriers. A signature may be required on delivery of the product. Our delivery charges are for all UK mainland addresses, except the Channel Islands. For addresses outside this area please ask for delivery costs before ordering.

Further Information

Some products in this catalogue may not be available for the whole life of the catalogue.

All personal information entered on the Order or VAT relief forms will be treated as confidential as detailed in our Privacy Policy. You can ask for a copy of the Privacy Policy or obtain one from our web site.

Our normal hours of business are: 8.15am to 4.45pm - Monday to Thursday, 8.15am to 4.00pm Friday.

Our Agreement With You

Prices

Whilst we do our best to keep any price rises to a minimum, we reserve the right to increase our prices at any time. Should we do so, we will contact you on receipt of your order with details of the increase giving you the opportunity to cancel your order if you wish.

- Should your payment not clear then we may, in addition to any other rights we may have:
- Suspend delivery of the product ordered or any part of them until we receive cleared funds.
- Legally recover those products already delivered to you from you or your premises at any reasonable time and retain ownership.
- Pass on to you any charges we incur in obtaining clearance of your payment.

You will not own the products until your payment for them has cleared.

VAT

VAT is calculated at the prevailing rate at date of invoice. Should the prevailing rate of VAT change from that used in our publications, calculations will be based on new rates and charged to you accordingly.

Delivery

Delivery to UK addresses normally takes 3 working days from the date of despatch of your order by us. It is made through independent carriers. The independent carrier may require a signature from you on receipt of your order.

If you do not receive your order within 28 days of placing your order please contact us.

Should your order arrive damaged, please contact us as soon as reasonably practicable. Please retain the original packaging.

Additional postage charges may be payable for deliveries to non-UK addresses; please contact us for further details.

Guarantee

All our products are covered by our guarantee.

You will invalidate the guarantee if

- You use the products contrary to instructions supplied with them
- You cause any damage to the products through misuse or negligent use of them.

This guarantee is not available

- If any product becomes damaged outside normal usage.
- For any consumables such as batteries.

If you wish to rely on this guarantee we will at our choice either repair or replace the products or, if appropriate, any parts of them. If we are unable to carry out any of the above through no fault of our own we will refund the price you paid for the products.

In all circumstances, except for faulty goods, this guarantee shall not exceed the price you paid for the products in question. No other remedies are available.

Our Products

Full descriptions of our products are given in our current catalogue or on line.

The products are only suitable for the intended uses described.

As a part of our continuing programme of product development we reserve the right to improve and update product designs.

Cancellation

You may cancel your order anytime from when you place the order up to ten working days after the date you received the goods but to do so you must notify us. We will respond confirming your cancellation and the date your notification was received. The date confirmed is the date the cancellation came into effect.

Unforeseeable problems

We are not responsible for delays outside our control (for example industrial dispute, act of God, inability to obtain raw materials) if this prevents or hinders our contract with you.

Our Agreement

An agreement is made between us once we have received and accepted your order.

Our agreement and any related matters are governed by English law. Your Statutory rights are not affected. This agreement is a summary of our full Terms and Conditions of Sale and Supply; you can ask for a copy or obtain one from our web site.
