PRODUCT CATALOGUE 2023/24

About this Catalogue

SARABEC® AIMS TO MAKE LIFE A LITTLE EASIER FOR THOSE WITH HEARING DIFFICULTIES BY PROVIDING HIGH QUALITY PRODUCTS THAT HELP YOU:

- Stay in touch with friends and relatives
- Know what's happening around the house
- Enjoy recreational time without feeling isolated

We have over 40 years of experience in providing products that offer simple hearing solutions for use both with or without a hearing aid.

We aim to supply all of our customers, both private individuals and companies alike, with a high quality service that's appropriate to their needs.

WE ARE PLEASED TO OFFER YOU OUR LATEST SELECTION OF PRODUCTS TO HELP YOU WITH:

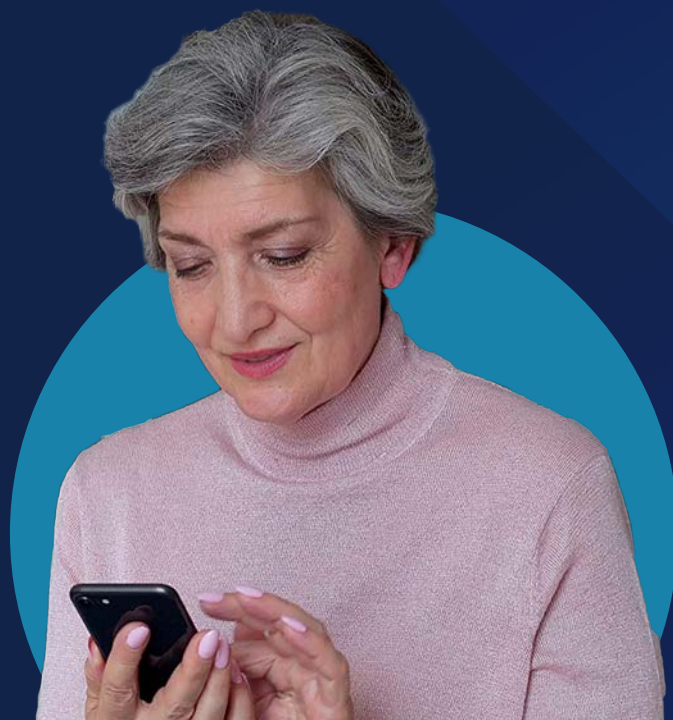

- Listening - enjoy TV, radio, and conversation at a volume suitable for you and others
- Alerting - doorbells, telephones, and alarms
- Telephones - amplified phones including corded, cordless, and mobile

BUYING FROM SARABEC

- Easy ordering online or over the phone
- Technical help when you need it - both before and after sales

1 MONTH TRIAL

With our 1-month trial policy, you can be sure that the products you choose are right for you by trying them in

the comfort of your own home. If you are not happy with the product, simply contact us and we will let you know the best way to return the product to obtain a refund. We cannot give you a refund if goods, when returned, are found to be damaged, incomplete or have been tampered with.

TECHNICAL HELP

If, at any time, you wish to discuss whether a product is right for you before ordering, then contact us, and our friendly, knowledgeable staff will be happy to help - they can also support you after your purchase if you need assistance when using your product.

VAT RELIEF

If you have hearing loss and are buying for your own use, you can obtain VAT relief on certain products in this catalogue. Products that are eligible for VAT relief are indicated as shown below.

This product does not qualify for VAT Relief.

VAT Relief is available on this product.

To obtain VAT Relief you must complete a VAT Relief Certificate at the time of your order. When ordering online simply tick the relevant section. VAT refunds cannot be given afterwards. If you are unsure, or want to know more, please contact us.

Note: Some accessories, if not bought as part of a system, cannot be given VAT Relief.

EVERYDAY LIFE WITH A PACEMAKER

Pacemaker manufacturers give detailed instructions about possible sources of interference from products that you should avoid. Please refer to your booklet about your type of pacemaker. If you have any further questions about what you can and can't do, please contact your pacemaker clinic. Further information is given on our website.

SYMBOLS USED THROUGHOUT THIS CATALOGUE:

A blue square icon with a white circle containing a stylized 'T' and a hearing aid symbol.	This product is suitable for users with hearing aids that have the "T" Loop setting or Loop Program
A yellow circular icon with a black border and the text "WARRANTY 2 YEAR WARRANTY" in black.	This product comes with a warranty for the number of years shown
A blue square icon with a white circle containing the Bluetooth symbol.	This product uses Bluetooth connectivity technology

Contents

03 TV & AUDIO

- 03 Digital Wireless TV Listening Systems
- 08 Induction Loop Systems
- 10 TV/Audio/Loop Accessories

Have difficulty hearing your television, radio, Hi-Fi or other audio? Bring the wanted sound direct to your ears without disturbing others. Our systems are designed to be used with or without hearing aids. Explore our portable & stationary systems, & enjoy recreational time again.

13 BLUETOOTH AUDIO

- 14 Equipment For Mobile Phones
- 15 Personal & TV Listening
- 16 Sleep Headphones & Sound Players

More and more hearing aids have Bluetooth capability built into them. You can now connect hearing aids to other bluetooth devices such as phones or TV transmitters via the "T" Loop setting or Loop Program.

17 PERSONAL LISTENING & COMMUNICATION

- 18 Listening Options
- 19 Personal Listeners
- 23 Personal Audio Accessories

Designed to be used with or without hearing aids, our Listening & Conversation products aim to make life easier if you have difficulty in daily listening situations or with conversations at home or otherwise. Versatile and portable, these systems use a range of listening options to bring sound closer to you.

25 HOME ALERTING

- 26 Signolux Home Alerting
- 35 Fireangel Smoke/CO Alarms
- 37 Doorbells & Accessories
- 42 Geomarc Amplicall Baby Monitor
- 43 Alarm Clocks

These products make you aware of everyday occurrences in the home or at work via vibrations and flashing lights, so you can "feel" and "see" the alerts. Get alerted to the ringing of the telephone or doorbell, the sound of the smoke or fire alarm or a baby crying.

47 PHONES & ACCESSORIES

- 49 Mobile Phones
- 51 Portable DECT Telephones
- 58 Corded Desktop Telephones
- 63 Phone Accessories

If telephone callers' voices seem very quiet or muffled, you will find a solution amongst our selection of telephones and amplifiers. Explore page 63 to view products that let you know the phone is ringing.

64 TINNITUS

- 65 Wellcare & Sound Oasis

Manage Tinnitus symptoms and reduce the effects of buzzing/ringing in your ears with our tinnitus relief products that create a relaxing atmosphere, reduce stress, and help you sleep.

67 COMMERCIAL AUDIO

- 68 LA90 Induction Loops
- 69 NX ProLoop Systems
- 70 Commercial Audio Accessories

We can work with you to improve communication for hearing impaired people throughout non-domestic environments like in a church, village hall or any public space.

71 ORDER FORM & INFORMATION

You can complete your order via this form and attach the VAT Relief Certificate (if applicable), and send it back to us in the post.

TV & AUDIO

DIGITAL & WIRELESS TV LISTENING SYSTEMS

WHAT IS A TV LISTENER?

TV listeners let you listen to your audio devices (TV, radio or other device), at a volume that you are comfortable with, without disturbing others. With no trailing wires, TV listeners bring the sound directly to your ears.

IS A TV LISTENER RIGHT FOR ME?

Do you want to listen to the TV at a higher volume than other members of the family? Is listening in a noisy situation stressful? Is turning the volume up on the TV or radio not enough? Do you have difficulty in hearing the programmes clearly?

If friends or family complain that your TV or radio is too loud then that's when one of our TV Listening systems may prove invaluable as they can drastically improve your entertainment enjoyment. With these wireless TV listening systems, you can choose how loud you want the sound to be without disturbing others. You can also move around freely without the need to have trailing wires between you and the device you're listening to (Note: you will still need to connect them

to your TV, radio or music to pick up the sound using the leads provided).

TV LISTENERS FOR HEARING AID USERS

Your hearing aid may have the "T" Loop setting or Loop Program. Select one of the products with the T symbol next to it to make the most out of your hearing aid and enhance your listening. Sounds will be transmitted directly to your hearing aid's T loop program, increasing intelligibility and significantly reducing background noise. Products without the T symbol are suitable for those who do not wear hearing aids. All TV Listeners require you to wear a receiver whether or not you use a hearing aid.

HOW DO TV LISTENERS WORK?

Digital listening systems use the 2.4GHz frequency to transmit their sound from the transmitter to the receiver. They use a coding system that means they are unlikely to suffer any form of interference. The coding system requires the transmitter to be matched/paired to the receiver(s) required. Multiple receivers can normally be used with a single transmitter.

sonumaxx^{NX}

SONUMAXX - A SIMPLE-TO-USE TV LISTENING SYSTEM FOR BOTH HEARING AID AND NON-HEARING AID USERS.

With its clear sound, the latest Sonumaxx Digital Wireless System will help you listen more clearly to your TV, radio, or other sound sources without any trailing leads.

With the Sonumaxx system you can switch between the transmitter and internal microphone in the receiver when listening to the TV sound. This is because Sonumaxx receivers have a built-in communication microphone and amplifier function, this allows the user to receive amplified sounds from conversations all at the press of a button on the receiver, very useful one to one speech with friends or family!

When listening to the TV, you can listen at your own volume without disturbing others. You can also move around whilst listening to TV, radio or Hi-Fi as the signal is not interrupted by walls. The system has a range of up to 25 metres and the headset systems have an output of up to 125dB.

OUR RANGE OF SONUMAXX SYSTEMS

There are two types of systems available; the standard Headset System where the headset and receiver unit are a single device, and the PR's; these systems allow you to plug any audio listening accessory into the receiver unit such as a neckloop, ear hooks, direct input etc. You can see all 4 options here.

SYSTEM COMPONENTS

All systems consist of two parts; a mains powered transmitter and a receiver powered by a rechargeable battery. The transmitter picks up the sound from your TV using the supplied connection lead kit or microphone. This sound is then sent to the receiver. The Sonumaxx systems are already paired for your convenience and to avoid interference.

BATTERY LIFE

A fully charged battery can give up to eight hours listening time depending on the volume level used. The system is supplied with a second battery to provide continuous listening. An intelligent charging system ensures batteries will be recharged fully in less than 3 hours.

Sonumaxx NX Headset System

Transmitter, Conventional Under-chin Headset Receiver & Connection Lead Kit with Microphone.

Sonumaxx NX Headset System			
Order code	230-416	Colour	Black/Grey
Price	£119.90 Ex. Vat £143.88 Inc. Vat	Size	Base: 125mm Ø x 40mm Receiver: 225x125x25mm

SARABEC® - Hearing products for a better lifestyle

PREMIUM
Digital Wireless Listening

EARIS PREMIUM WIRELESS SYSTEMS

WHAT IS EARIS PREMIUM WIRELESS LISTENING?

The Earis System is a premium, digital TV listening system that uses dynamic sound technology to deliver the highest sound quality and clarity that is currently available in TV listening equipment today. Brilliant for people with or without hearing aids to watch TV or just listen to music. The system is easy to use and is ready to connect to TV and audio systems.

HOW DOES THE EARIS PREMIUM WORK?

Earis significantly improves understanding of speech in audio even if background sounds are present.

You can choose from 5 listening profiles for a personalised listening experience.

The fast-acting 'Automatic Sound Profiling' feature eradicates sudden volume changes in sound after you've selected your chosen listening level - great for when changing channels or when adverts cut in.

EXCELLENT 1:1 COMMUNICATION

Earis receivers have a communication amplifier function, where the built-in microphone in the Earis receiver amplifies sound in the same room, making it excellent for 1:1 communication. Earis then cleverly stores this setting to ensure that the user always returns to the last set volume when switching over.

SELECT FROM TWO EARIS OPTIONS:

Two Earis Premium systems are available; a headset

receiver system, and a PR Neckloop System. Each system uses the same transmitter, which has connections and cables for digital audio and analogue audio signals, both of which are usually present on all TV's and also Sky, Virgin and Freeview boxes. The PR Neckloop System allows you to plug in your choice of listening device (headset/earphones/ear hooks/or anything with a standard 3.5mm jack plug).

THE SYSTEMS FEATURE:

- Built-in receiver charging cradle and charging port for an optional second battery
- Connection kit for TV and audio systems including an optical digital audio lead, audio connection lead with 3.5mm stereo plugs, and adapter to RCA phono plugs
- Up to 122dB amplification
- Replaceable Li-Pol rechargeable battery, with fast full charge in under 2 hours - 80% in 30 minutes
- Approximately 8 hours listening time per full battery charge
- Large tactile volume wheel with LED level display
- Easy-to-use communication amplifier available at the press of a button on the receiver
- Tone & Balance controls
- PR Pocket Receiver: Output connector 3.5mm stereo jack socket, 16ohm minimum

Through extensive research into the listening needs of hearing-impaired people, it has been determined that Earis's 5 listening profiles match the needs of 95% of users when they are listening to speech and/or music from film, TV, radio or other sound source. Earis delivers constant high-quality sound using the selected profile.

Earis Premium Digital Headset System

Earis Premium Digital Headset System Transmitter, Under-chin Headset Receiver & Connection kit. Amplification level (up to 122dB+).

Earis Premium Digital Neckloop System

Earis Premium Digital PR Neckloop System Transmitter, Receiver, Plug-in Neckloop & Connection kit.

Earis Premium Digital Headset System

Earis Premium Digital Neckloop System

Order code	230-191	Colour	Graphite/Silver
Price	£264.00 Ex. Vat £316.80 Inc. Vat	Size	Receiver: 63mmØx24mm

CL7500 OPTI WIRELESS HEADPHONES

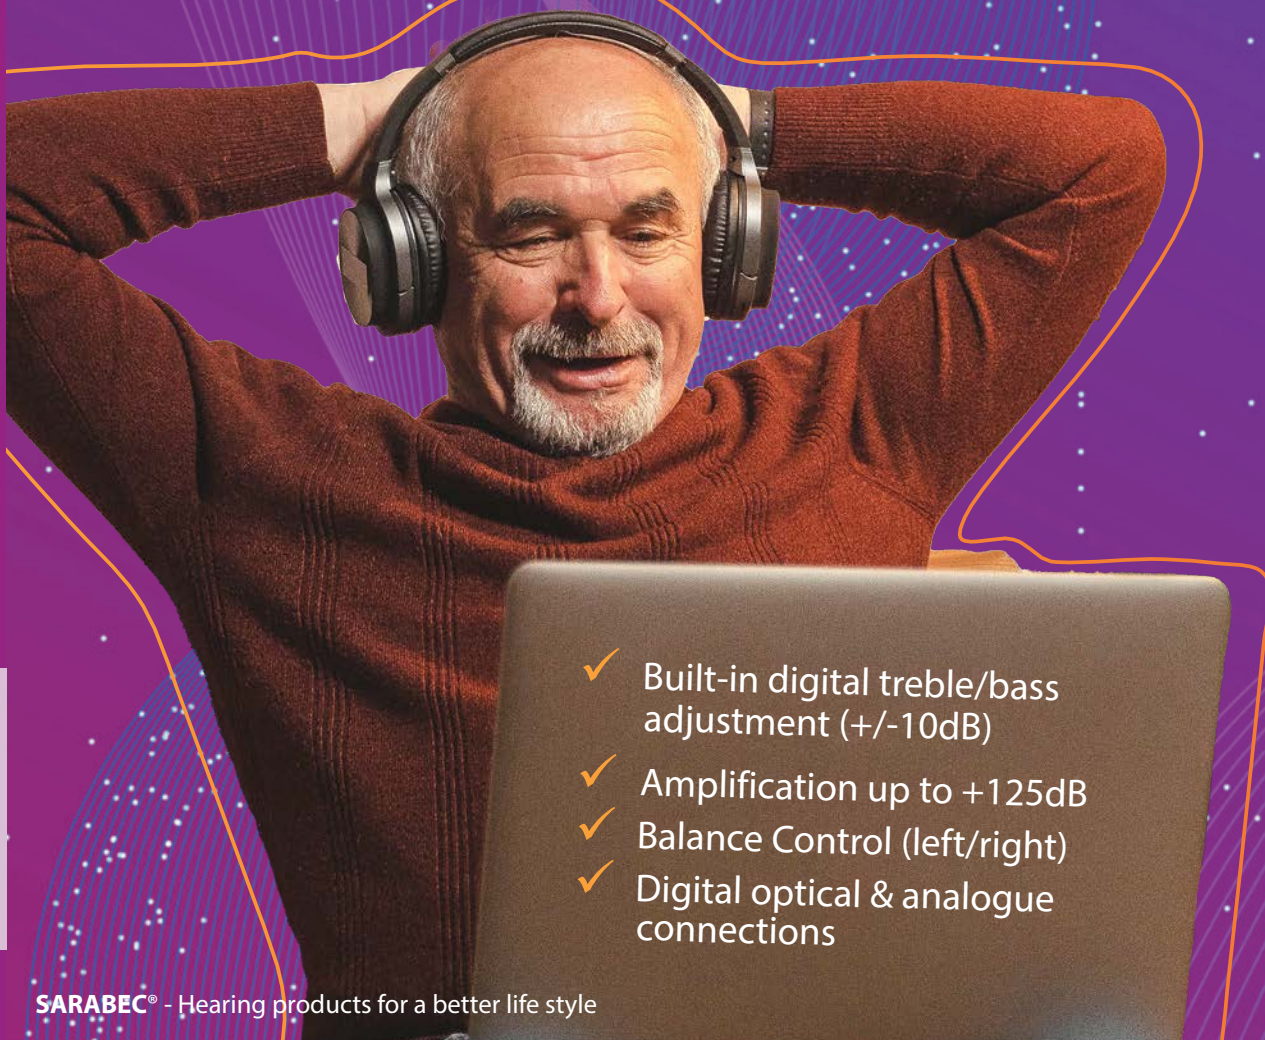

THE GEEMARC CL7500 OPTI IS DESIGNED FOR HEARING-IMPAIRED PEOPLE.

It has an adjustable volume of up to 125dB SPL, making it suitable for people with hearing loss ranging from low to severe. The headset is lightweight, weighing in at only 260 grams. The earpieces contain controls which include Left & Right Balance, & volume and tone. You can charge your wireless TV headset by placing it on its base, using an external battery, or even connecting it directly to your laptop! It takes 6 hours for the batteries to fully charge.

The CL7500 main base can be plugged into your televisions digital optical or analogue output sockets using the leads provided. It also works with other audio devices such as radios & DPD players, as long as those devices have a compatible audio output socket.

CL7500 OPTI Wireless Headphones

Order code	252-221	Colour	Silver/Black
Price	£141.66 Ex. Vat £169.99 Inc. Vat	Size	Base: 205x130x75mm Headset: 190x160x65mm

- ✓ Built-in digital treble/bass adjustment (+/-10dB)
- ✓ Amplification up to +125dB
- ✓ Balance Control (left/right)
- ✓ Digital optical & analogue connections

INDUCTION LOOP SYSTEMS

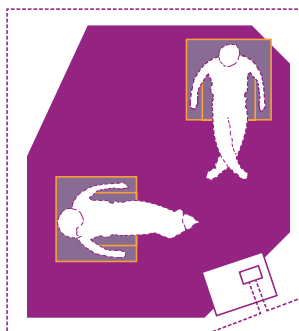

WHAT IS AN INDUCTION LOOP SYSTEM?

Induction loop systems transmit sound directly to a hearing aid's loop ("T") facility or Program which is built into or can be enabled in most hearing aids.

The main advantage of using the loop facility is that it can minimise the distracting effect of background noise and so enhance the sounds you want to hear making them easier to understand. Because the loop receiver facility is built into your hearing aid you will not need to wear an additional receiver.

A small amplifier is positioned near the television or sound source, it is then plugged into the television/sound source using one of the supplied direct connection cables (most commonly used is the optical digital cable - the socket for this may be marked up on your TV as Optical, SPDIF, TosLink or Digital Audio).

A very thin wire runs around the perimeter of the room to and from the amplifier. This wire can be positioned underneath floor surfaces such as carpet, laminate, or wood. It can also be attached to/follow your skirting boards or picture rail, or even be placed in a ceiling cavity or attic.

Some users find that though they benefit from the sound of the TV being directly transmitted to their hearing aid, they feel

cut off from other useful sounds like the doorbell or their partner speaking. This can be overcome by asking your audiologist for an additional program where the loop and microphone are mixed together (sometimes known as M/T or mixed loop and mic).

The real beauty of a loop system is that once installed, and your chosen volume and tone levels are set to how you like them, there is little to no interaction required with the amplifier.

Not sure how to use the loop features of your hearing aid? Ask your audiologist as you may need to activate the features, or adjust the sensitivity of the loop program.

Both the LA240 Room Loop System and the LA240 Loop Pad are supplied with lead kits that let you connect the amplifier directly to your TV with digital optical, phono and jack connectors, and they both come with a microphone that has a 1.2m lead (can be used for conversation or monitoring the telephone or doorbell ring). See next page for other connection possibilities.

DIFFERENCES BETWEEN THE ROOM LOOP SYSTEM AND LOOP PAD SYSTEM:

The room loop system will cover an entire room, and you will pick up the sound from the system wherever you are within the room. However a loop pad system generates a very localised loop signal via its small loop pad which goes under a cushion or on the back of a chair. You will only pick up the signal while sitting in that one place.

LA240 Room Loop System

This system will cover an entire room.

LA240 Room Loop System

40 meters (approx 130ft) of thin, white loop cable (2.5mm diameter) and cable clips

Order code **135-250**

Size **180x140x42**

LA240 Loop Pad System

Ideal for a single person or where a limited loop field is required. (Supplied with 5m (15ft) connecting lead.

LA240 Loop Pad System

This LA240 system includes a pad in place of the cable reel.

Order code **135-255**
Price **£134.90 Ex. Vat**
£161.88 Inc. Vat

Colour **Silver**
Size **180x140x42**

NEED HELP CONNECTING OUR EQUIPMENT TO A TELEVISION OR OTHER AUDIO SOURCE?

CONNECTING DIRECTLY TO A TELEVISION

When connecting directly to a TV set via optical, you must ensure the TV is set to PCM. To do this, go into the audio/sound settings menu on the TV and look for 'Digital Audio Output/Optical Out', normally this would be set to 'Dolby Digital', it needs to be changed to 'PCM'. Please note that some televisions auto switch this setting!

NOTE: Using the microphone supplied with your equipment attached to the speaker grille of the television will always return good results and is an excellent back-up way to connect to the TV.

SETTING UP YOUR EQUIPMENT WITH DIRECT CONNECTION TO SKY Q & SKY HD BOXES VIA OPTICAL

- » Press **Home** on your Sky Q remote, select **Settings**, then select **Setup**.
- » Select **Audio visual**, then select **Digital Audio Output** optical and set it to **NORMAL**
- » Press the **GREEN** button to save the settings
- » Power **OFF** the Sky Box, leave for 30 seconds and turn back on, leave for 5 minutes so the box can re-calibrate itself and then test the system.

Note: Sky Glass TV's & Sky Stream Pucks are not compatible with our equipment via a direct connection. However, a microphone may still be used. Please contact us for further details if required.

SETTING UP EQUIPMENT WITH DIRECT CONNECTION TO VIRGIN MEDIA SET TOP BOXES VIA OPTICAL

- » Press **Home** on your remote
- » Select **Help & Settings**
- » Select **Settings**
- » Select **Audio**
- » Choose **Dolby Digital to PCM**. This setting applies to both HDMI and optical out.
- » Power down the box for 5 minutes, restart the box, leave for a few minutes and test the system
- » **Virgin Media 360 Boxes ONLY: Select Settings > Audio & Video > PCM2.0> Restart Box as above.**

WHY DON'T I GET AUDIO FROM DIGITAL SOURCES (NETFLIX, APPLE TV, FIRE STICK, ETC)?

Audio coming from certain content providers or devices (Netflix, Amazon Prime, Apple TV etc.) is set to output Dolby and not PCM by default. To resolve this, you will need to change the digital audio output format in the app or device to PCM, firstly try the normal audio settings within the app. Usually, these audio settings are only available once something is playing on screen. This does NOT guarantee that you will hear the audio from these sources through your device but it does give the best chance.

N.B When connecting directly to an external device such as SKY or Virgin Media you will not hear channels and smart services from the TV through the connected equipment.

COMMON SOCKET TYPES

<p>Optical/SPDIF/Digital Audio/TOSLink Preferred connection method, will generally require a change to the TV or connected equipment to PCM audio output.</p>	
<p>HDMI Can be used in conjunction with the Sarabec ARC Audio Converter.</p>	
<p>PHONO/RCA Can be a good option, but make sure that the RCA sockets are marked as Audio Output and NOT Audio Input.</p>	
<p>3.5mm Audio/Headphone A good method of connecting. However, in most cases, using this socket will turn off the internal speakers of the television.</p>	

TV & AUDIO ACCESSORIES

DIGITAL CONNECTION CONVERTERS

Dolby Digital Audio Decoder Kit

A clever little device which will, in most cases, allow you to connect any of our Television Listening Systems (LA240, Sonumaxx & Earis) to any television, set top box, or audio output device without needing to change the settings on the television to output PCM signals. This is especially useful when the television or other audio source doesn't auto switch to PCM output or when you cannot find the appropriate settings in the menu systems.

Dolby Digital Audio Decoder Kit	
Order code	354-132
Price	£29.99 Inc. Vat
Colour	Black
Size	105 x 75 x 25mm

Sarabec HDMI ARC Audio Extractor Kit

Connect your existing listening equipment to your television's ARC HDMI socket with the Sarabec ARC Audio Extractor Kit. Many televisions do not have an optical or traditional audio output sockets, so using this adapter will allow you to extract audio from the TV. This is especially useful if the television doesn't have optical or traditional audio sockets.

It can also be used in place of a traditional digital to analogue converter. Supplied with 0.5m HDMI lead and USB power cable.

HDMI ARC Audio Extractor Kit	
Order code	354-130
Price	£39.98 Inc. Vat
Colour	Black
Size	100 x 70 x 25mm

AUDIO & VIDEO MISC.

Loop Pad 340 X 340mm

Use with loop amplifiers and systems if the area to be looped needs to be small and discreet. Use at home, place on a chair or chair back, and in reception areas under counters. Also used to demonstrate loop systems to clients.

Loop Pad 340 X 340mm

Order code **110-053**
Price **£24.99 Ex. Vat**
£29.99 Inc. Vat

Colour **Black**
Size **340x340mm**

Standard Microphone 1.2m lead

Standard microphone for many of our products including amplifiers.

Standard Microphone 1.2m lead

Order code **330-005**
Price **£17.99 Inc. Vat**

Colour **Black**

40m Single Core Loop Cable

A 40m reel of single-core loop cable for use with our current LA240 loop amplifier as well as older LA100/LA200/LA110/LA210 & LA215 home loop amplifiers.

40m Single Core Loop Cable

Order code **340-037**
Price **£17.88 Inc. Vat**

Colour **White**
Size **Length - 40 metres 0.75mm² diameter Impedance - 1.5 ohms**

LOOP ACCESSORIES

Geemarc Easy-to-use TV1 Remote Control

The TV1 remote control is very easy to use with its simple and large design. The channel and the volume can easily be adjusted with the large programmable buttons.

- Extra-large buttons for easy use
- Equipped with 19 programmable buttons

Geemarc Easy-to-use TV1 Remote Control

Order code	252-222	Colour	Black
Price	£10.83 Ex. Vat £13.00 Inc. Vat	Size	166x46x25mm

Doro HandleEasy 321rc Remote Control

The HandleEasy 321rc is specially designed for people who have limited dexterity. It is very easy to hold and to use for changing channels and adjusting the volume of your TV or home stereo.

- 7 programmable keys
- Hard-keys for best tactile feeling
- Learning function - learn commands from your existing remote controls (program channel keys for a set-top box and volume control for a TV)
- Compatibility to RC5/RC6 IR equipment (all major brands of TV/Video/DVD/stereo/set-top boxes). Includes dual-command support
- 3 x AAA batteries (included)

Doro HandleEasy 321rc Remote Control

Price	£24.98 Inc. Vat	Size	165x52x30mm

Bluetooth Audio

WHAT IS BLUETOOTH?

Bluetooth is an easy to use short-range wireless communications technology now found worldwide in millions of products that we use every day - including headsets, smartphones, laptops, and portable speakers. Bluetooth technology is used for short range wireless communication and listening. It is a secure system that allows you to enjoy sound that is free of interference and the distractions of background noise. Bluetooth devices radiate much less power than a mobile phone and typically have a useful range for most devices between 5 and 10 metres.

BLUETOOTH TECHNOLOGY FOR HEARING AIDS

Bluetooth is increasingly being used to connect hearing aids to other devices. Hearing aid streamers often use Bluetooth to connect to phones or TV Bluetooth transmitters and then send those signals to the hearing aid via the aids own radio system or "T" Loop setting or Loop Program. More and more hearing aids have Bluetooth capability built into them.

BLUETOOTH NECKLOOPS

Bluetooth neckloops are universal receivers, and unlike streamers, can be used with any hearing aid that has a "T" Loop setting or Loop Program. So, if you change your brand of hearing aid, you won't need a new streamer. They can be paired with mobile phones and any other device that has a bluetooth output. Bluetooth neckloops allow you to freely move around whilst being connected to your mobile phone, even if it's sitting on your desk, left on the couch or in your bag. They enable discreet conversation without using the hands-free mode.

BLUETOOTH® ADVANCEMENTS

As technology improves, it's now possible to connect (pair) more than one device with the Bluetooth receiver, so switching between a phone and TV becomes easier. More recent introductions of Bluetooth (current version: 5.0), means that the delays in receiving sound, that some people previously experienced, have been rectified, including delays in experiencing lip-sync, and more importantly, the power required to run the receivers.

BLUETOOTH EQUIPMENT FOR MOBILE PHONES

KEEP YOUR HANDS FREE WHILST MAKING AND ANSWERING PHONE CALLS.

The CM-BT2 Bluetooth Neckloop uses short range Bluetooth wireless technology, giving you a wireless connection between your Bluetooth-enabled phone and your hearing aid via the "T" Loop setting or Loop Program.

Although primarily designed for use with mobile phones, there are plenty of other devices you can now communicate with when using a Bluetooth neckloop.

The sound is received by the CM-BT2 and transmitted direct to the loop receiver in your hearing aid. You can control the volume of the loop directly on the receiver. A built-in microphone allows full two-way communication.

- Power supply and charging cable
- 3.5mm socket to listen via other accessories

CM-BT2 Bluetooth Neckloop

Order code **230-007**
 Price **£84.99 Ex. Vat**

BLUETOOTH SLEEP HEADPHONES & SOUND PLAYERS

SNOOZEBANDS EASE TINNITUS SYMPTOMS THROUGH BLUETOOTH CONNECTIVITY.

Compatible with **any** Bluetooth device, these Snoozebands connect to your mobile phone so you can listen to relaxing sounds to ease your tinnitus when trying to sleep or even just use it to listen to music or audio books. The Snoozebands range from 10-15 hour playtime, offer soft padded speakers and a built-in microphone to answer calls. Simply connect to your smartphone or Bluetooth player and use your favourite apps or sounds to help with your tinnitus. Soft, breathable, comfortable, and washable material. There are 3 Snoozebands to choose from below.

SnoozeBand™ Original Grey

Enjoy a deeper, more comfortable sleep with the original SnoozeBand™. The ultra-soft thin padded speakers offer unmatched comfort and an immersive audio experience. It's perfect for side sleepers. Includes integrated microphone. One size fits all.

- Automatic shut-off after 1 or 2 hours
- Up to 10-hour playtime from 1 charge
- No disturbing flashing light

SnoozeBand™ Original Grey	
Order code	260-100
Price	£38.99 Inc. Vat
Colour	Grey
Battery life	8-10 hours

SnoozeBand™ Pro 2.0

The updated SnoozeBand™ Pro model, with thinner, built-in padded speakers and a 3D eye mask for a true black-out experience. Made of soft brushed cotton on the outside and lightweight padding around the eyes, allowing you to relax & enjoy your favourite sounds.

- Blocks 100% of light
- 1 charge (up to 10 hours of playtime)
- Strap to adjust size

Order code	258-109
Price	£44.80 Ex. Vat £53.76 Inc. Vat
Colour	Silver/Grey
Size	63mmØx 66mm

PERSONAL LISTENING & COMMUNICATION

LISTENING TO CONVERSATION

PERSONAL LISTENERS

If you have difficulty catching everything that is said in conversation you may benefit from using one of our Personal Listeners which amplify the sounds you want to hear and brings them closer to your ears.

HOW TO USE A PERSONAL LISTENER?

You can use a personal listener for conversation with friends or at work where you might find listening in a group or noisy situations stressful. Then, later in the day, you can use it to relax & listen to TV, radio, & music on your device or computer.

CHOOSE THE WAY YOU WANT TO LISTEN

Choose between headphones, headset or earphones, or use your hearing aid on the "T" Loop setting or Loop Program with a neckloop or ear hook. Your hearing aid may have the "T" (loop) facility. With this, you can enhance your listening by making more of your hearing aid. Sounds will be transmitted directly to your hearing aid, significantly reducing background noise.

SARABEC QUALITY

Sarabec® audio products provide clear, sharp sound reproduction leading to relaxed, stress free listening. These versatile products allow you to connect directly to various types of audio & visual equipment.

Telephone (voice): 01642 247789
Fax: 01642 230827 Textphone (NGTS): 18001 07497 242 294

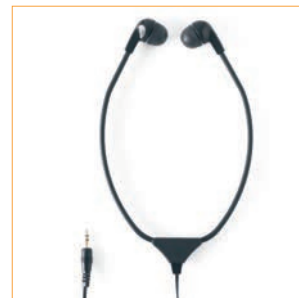

www.accessfocound.com
email: mail@sarabec.co.uk

LISTENING OPTIONS

These listening options can be used with Crescendo, Sonumaxx & Earis. They can also be used independently with any piece of equipment that has a 3.5mm jack socket such as music players, laptops and tablets.

HEADSET

Designed to be worn under the chin. Lightweight and comfortable, these are the most popular headsets giving the loudest output. They are suitable for mild to moderate hearing loss. They have rubber ear tips that are very soft and comfortable to wear. These ear tips are washable and can be renewed.

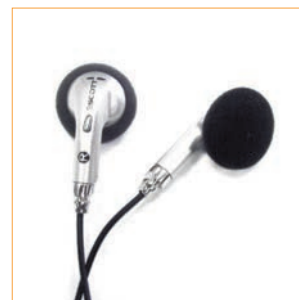

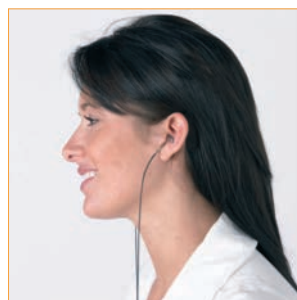

HEADPHONES

Traditional style lightweight over the head headphones with an adjustable headband. Suitable for mild to moderate hearing loss. Can also be worn over hearing aids, and use either the microphone or "T" Loop setting or Loop Program.

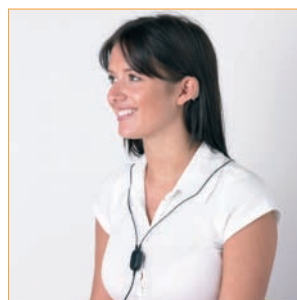

EAR PHONES

Modern in-ear earphones designed to be lightweight, comfortable and discreet, they have the same mini loudspeakers as the headset. They are supplied with clear silicone ear moulds to help them stay in your ears and seal so that feedback can be reduced. Suitable for a mild to moderate hearing loss.

NECKLOOP

If your hearing aid has the "T" Loop setting or Loop Program, then you can make more of your hearing aid and its personalised settings by using a loop. The neckloop is a personal loop worn around the neck and transmits the sound directly to your hearing aid when switched to "T" or loop setting.

EAR HOOK

An ear hook or ear loop has a very small loop built-in to a hook similar to the shape of a behind the ear hearing aid. It is extremely thin and comfortable to wear. It is often found to be more discreet than a neckloop. Mono and Stereo versions are available. For those with two hearing aids, the stereo version would be used.

PERSONAL LISTENERS CRESCENDO 60 RANGE

WHAT IS THE CRESCENDO PERSONAL LISTENER?

The Crescendo 60 personal listeners will amplify conversation, or even the sound of television & audio, allowing you to listen at a volume that is comfortable for you. There is now no need to have the television or radio volume at a level that will disturb your family, friends or neighbours. You can take part in conversation with the help of the Crescendo which transmits the sounds clearly into your ears, effectively improving your

overall listening experience.

FOR USE WITH THE TV & FOR CONVERSATION

The Crescendo Personal Listener is a portable listener which is light and comfortable to use. For conversation, use the plug-in microphone to pick up the sound. For use with a TV or radio either a microphone or direct connection lead is used to pick up the sound. The Crescendo Personal Listener requires no technical knowledge to assemble, simply plug the accessories into the appropriate sockets and it is ready to use.

WHAT DO THE CRESCENDO SYSTEMS OFFER?

The range of systems listed allows you to choose a complete ready-to-use system, especially suited to your needs.

Some of the features of the Crescendo 60's include:

- A rotary volume control
- A rotary tone control (to boost high or low tones)
- An indicator "on" light with a low battery warning
- Mode selection microphone, direct input & loop pickup
- 2 AA alkaline batteries (supplied) for up to 60hrs use
- Belt clip & Neck cord
- A plug-in microphone for 1:1 communication
- Additional microphone (1.2m lead & tie-clip supplied) in case microphone needs to be placed closer to the sound source.
- Velcro pads for attaching the additional microphone to a loudspeaker grille
- A 3m extension for microphone or other listening option.

röger

Roger is an intelligent wireless technology that transmits speech directly to hearing aids and cochlear implants, helping to overcome distance and noise.

Functioning like a third ear, Roger allows people with hearing loss to learn, work and socialise more easily - a big step towards more inclusive societies and greater personal well-being. Roger technology works as a system that enables a speaker's voice to be transmitted from a Roger wireless microphone to a listener's hearing aid or cochlear implant via Roger receivers.

Up to **62%** more understanding of speech in noise and over distance when wearing hearing aids in combination with Roger microphones, compared to people without hearing loss.

Phonak Roger On Transmitter (Champagne)

Phonak's latest state-of-the-art wireless microphone **Roger On** incorporates MultiBeam 2.0 Technology, providing excellent speech-understanding in noisy situations. Roger On is a versatile microphone transmitter, ideal for situations where background noise is present such as pubs and restaurants. It is used in conjunction with suitable Roger receivers, such as the Roger Neckloop receiver or Roger X ear-level receivers (purchased separately).

Phonak Roger On Transmitter (Champagne)

Order code **240-004**
Price **£669 Ex. Vat**
£802.80 Inc. Vat

Colour **Champagne**
Size **100x24x14mm**

Phonak Roger Neckloop (03)

Phonak Roger Neckloop is a universal inductive neckloop receiver that allows any person with hearing loss to have industry-leading speech-in-noise benefits.

Phonak Roger Neckloop (03) can be used together with all Roger microphones, and it is compatible with hearing aids, BAHA's, and cochlear implants with a "T" Loop Setting or Program, regardless of the hearing device brand. It is worn around the neck by adults, students, and children above 8 years old to give access to the complete benefits of Roger technology in noisy situations and over distance, bringing conversations closer.

Designed for everyday use – with its lightweight and detachable neckloop in two lengths, it is comfortable to use. Once connected to a Roger microphone it stays connected. Just switch it on and it lasts for 10 hours. Roger Neckloop uses a USB C interface for charging and digital output, has an easy-to-read display, and a 3.5mm headphone audio output.

Phonak Roger Neckloop (03)

Roger Neckloop replaces Roger Mylink.

Roger Select (Champagne)

The Roger Select is a versatile, wireless transmitting microphone from Phonak that uses their innovative MultiBeam Technology. The Select has multiple microphones pointing in six directions covering speech over 360°.

When it is placed in the centre of a table, it automatically selects the person who is talking and seamlessly switches from one speaker to another, keeping you part of the conversation. When there are individual conversations around the table you can tap the segment in the direction of the person you are speaking with to focus on their speech.

Roger Select can be used in many different situations such as:

- In restaurants, cafés, etc.
- Small group conversations with up to 6 participants
- 1:1 conversations with a friend, partner or caregiver
- During lectures or in class
- Outdoor and indoor activities (gym, guided tour)
- Watching TV
- Landline phonecalls (with adaptor - not included)
- Audio/voice from the computer, radio

PERSONAL AUDIO ACCESSORIES

Explore our range of Listening accessories for use with the systems we supply, and for those that have now been discontinued.

AMPLIFY SOUND WITH LISTENING ACCESSORIES

You may not need an amplifying system. You might find that you can improve your entertainment enjoyment simply by utilising one of these accessories, and plugging them directly into your own system. Typically, you can use any of these accessories where there is a suitable headphone output. Although connecting the accessories to your own equipment as opposed to one of our full systems may not provide the same level of power, it may still become loud enough for you to use more comfortably.

FOR USE WITH OR WITHOUT HEARING AIDS

Using any of these products with or without a hearing aid will help bring the sound closer to you, while reducing background noise. For hearing aid users, the sound is transmitted inductively, directly to the hearing aid and thereby cuts out background noise. The issue you may have is that some of the small MP3 players do not have enough output to drive a neckloop.

USING YOUR HEARING AIDS LOOP PROGRAM

If you want to use your hearing aids "T" Loop setting or Loop Program, then we would recommend the Ear Hooks as these give excellent reproduction. If you have two hearing aids and use the stereo Ear Hook, then please note that if your MP3 player has stereo output you will hear in Stereo, unlike a Neckloop which only transmits in Mono. For these items, headphone extension leads can be used to extend the distance between you and the audio equipment.

HEADPHONES

LH-056 Headphones

The LH-056 headphones have integrated volume control in the connecting lead, which allows the separate adjustment of the left and right side. This lightweight headphone is specially designed for speech intelligibility. They are very comfortable, and will give a relaxing sound experience. The connecting lead is 5.5m long and comes with a 3.5mm jack plug and a 6.3mm adapter.

- 3.5mm Audio Jack Plug
- Electret microphone

Plug In / Communicator Microphone		Colour Black		
Order code	330-009			
Price	£13.79 Inc. Vat			

HOME ALERTING SYSTEMS

WHAT ARE ALERTING DEVICES?

Alerting devices make you aware of everyday occurrences at home or at work, e.g. the ringing of the telephone or doorbell, alarm clocks, the sound of the smoke or fire alarm, or a baby crying. You'll either "feel" these occurrences via a vibrating pad or "see" that these are happening via a flashing light. This Alerting section offers a rich variety of choice.

THE COMPLETE HOME ALERTING SYSTEM

Full home alerting systems allow you to completely tailor a system to your needs - meaning a single receiver device will warn you of all the occurrences mentioned above. Add more receivers to these systems for added flexibility.

SMOKE ALARM SYSTEMS

Smoke alarm systems are invaluable to hard of hearing people, particularly if they remove their hearing aids at night. You could benefit from the independence and security of such a system with a vibrating pad and flashing strobe.

DOORBELL SYSTEMS

A range of totally wire-free doorbells, either battery or mains powered, means that you won't miss that important parcel or caller at

your door. You can use the portable chimes in whichever room you choose, and the battery powered chimes can be taken into the garden or shed.

Please remember that building structures e.g. metal, uPVC door frames and thick walls may affect transmission. **Where a range for a product is quoted this is the maximum without obstructions.*

TELEPHONE SYSTEMS

Do you miss out on telephone calls because you don't hear the phone ringing? No matter if you're at work in a noisy workshop, watching TV in your lounge with the doors closed and the phone is ringing in the hallway, or you're listening to a CD through your hearing aid or headphones, these telephone alerting products can help keep you alerted.

ALARM CLOCKS

Getting up in the morning can be a chore for anyone, but if you have difficulty hearing the alarm, your sleep will be less than peaceful if you are worried about sleeping in. A little assistance from either a vibrating pad and/or a flashing light could make that morning feel less stressful.

THE SIGNOLUX ALERTING RANGE

Get alerted to events around the home with our complete Signolux systems. Explore our range of transmitters, receivers, accessories & batteries.

The Signolux alerting systems now include additional features found on more expensive systems to make it the affordable solution for deaf and hard of hearing people alike. The simple, efficient, and cost effective system is ideal for those who are wanting peace of mind.

Get alerted to sounds around the home. The receivers will alert you via a combination of loud sound, visual indications and or vibrations. This sophisticated system uses just two universal transmitters to keep installation as simple as possible. The options include an audio transmitter that uses microphones to detect sound, or a direct transmitter that can be connected to existing devices around the house. *Dedicated alerts are included for person-to-person, bell push, and smoke alarm.*

FEATURES AND BENEFITS:

- All receivers come with either a vibrating pad, strobe for bright white flashing lights and coloured indicators, or loud sound alerts.
- Receivers have either 6 or 8 coloured icons to visually identify the source of the sound
- Up to 8 transmitters can be coded to each icon
- Choice of 15 loud sounds up to 90dB output
- Wirefree; uses 868 MHz radio frequency to send and receive system signals
- Secure coding system to avoid interference from neighbouring systems
- Operating range of up to 200m
- Wireless receivers can be carried around for use in and around the house
- Portable pocket or clip-on vibrating receiver
- Plug-in mains powered strobe receiver
- Easy wireless installation between transmitters (sound detectors) and receivers
- Additional receivers and transmitters can be

- added to your system as required
- Battery operated with mains adaptor option
- Batteries included with the kits where necessary

SIGNOLUX SYSTEMS

Signolux Tower Doorbell System

Introducing the new standard system in the Signolux range, designed for people with hearing problems to inform about domestic events. The 2-part system, made up of a Signolux bellpush and Signolux Tower receiver, comes supplied with rechargeable batteries and a mains power supply as standard.

- 16 x chime sounds
- Extra loud: 95dB+ on some sounds
- Mains powered + rechargeable
- 3.5mm socket for vibrating pad & other alerts
- 8 x easy-to-see visual indicators
- Bright flashing light with 360° visibility
- Compatible with older Signolux transmitters

Signolux Plug-in Doorbell System

A plug-in flashing doorbell system which also interacts with the standard Signolux system transmitters.

- Indicators - flashing lights & coloured LEDs
- 3.5mm socket for vibrating pad & other alerts
- Doorbell symbol displayed on the front
- Displays telephone, baby cry, pager, fire & alarm alerts when attached to the correct transmitters
- Supports additional signal transmitter modules

Please note, this is a flashing/indication ONLY system, it does not make any sound unless a sound module is plugged into it.

SIGNOLUX TRANSMITTERS

Signolux Audio Universal Transmitter

Used to pick up audio signals from different sources such as a baby crying, an existing doorbell, an intercom system or the telephone ringing.

Signolux Direct/Phone Universal Transmitter

Used to alert the user to the telephone ringing (by plugging into a BT socket), can be used to wire into an existing hard-wired doorbell system, alarm panel or water level indication.

Signolux Audio Universal Transmitter

Order code	230-720	Colour	White

SIGNOLUX DETECTORS

Signolux Guardion Smoke Detector

The Signolux Guardion Smoke Detector works seamlessly with the Signolux Visual Indication System. It operates as a standard smoke alarm, but also sends a wireless signal to a Signolux receiver so that a user may be alerted by loud sounds, visual indications and vibrations.

- Optical smoke alarm transmitter
- Fitted (non-removable) lithium battery

Signolux Guardion Smoke Detector

Order code	230-724	Colour	White
Price	£89.99 Ex. Vat £107.99 Inc. Vat	Size	95mmØx50mm

Signolux Guardion CO/Heat Detector

This new combined smoke and fire detector detects and reports elevated carbon monoxide levels in the room air at an early stage and also reacts when the room temperature exceeds a limit of 60 °C. Particularly great for rooms with fireplaces or garages or in areas in which there are fuel-operated devices and incomplete combustion processes which cannot be ruled out, or where there is a risk that harmful smoke gases like carbon monoxide can spread. Connects to any Signolux receiver in the Signolux range. Ideal for use in areas unsuitable for regular smoke detectors as they feature optoelectronic sensor technology (smoke particle detection), which can increasingly lead to false alarms. Up to 10-year battery life (fixed battery, not changeable).

- Self-testing function & warning given at low battery level
- Loud alarm tone

Signolux Guardion CO/Heat Detector

Order code	230-728	Colour	White
Price	£89.99 Ex. Vat £107.99 Inc. Vat	Size	95mmØx50mm

Signolux Alarmo 2 Detector

When an independent alarm is detected, Alarmo transmits a radio signal to all Signolux receivers within range, which then alerts you to the event.

There is no need to replace your smoke alarm because Alarmo can detect the alarm sounds from existing smoke alarms without the need for any modification or wiring.

It incorporates a highly intelligent processor which listens out for a typical domestic smoke alarm sound, and is therefore extremely good at not creating false alerts.

Signolux Alarmo 2 Detector

Order code	230-727	Colour	White
Price	£119.90 Ex. Vat £143.88 Inc. Vat	Size	112x95x38mm

SIGNOLUX RECEIVERS

Signalux Tower Receiver

Introducing the new standard receiver in the Signolux range. It comes supplied with rechargeable batteries and a mains power supply as standard. This product was designed for people with hearing problems and informs about domestic events with a bright 360 degree flashing light, LED display of the event symbols and powerful tones, the volume of which can be adjusted.

- 16 x chime sounds
- Extra loud: 95dB+ on some sounds.
- Mains powered + rechargeable
- 8 x easy-to-see visual indicators
- 3.5mm socket for vibrating pad & other alerts
- Bright flashing light with 360° visibility
- Compatible with older Signolux transmitters.

Signalux Tower Receiver

Price	£56.49 Ex. Vat £67.79 Inc. Vat	Size	143x80mm

Signalux DS2 Alarm Clock

The DS2 drives all of your alerts to a single point; your bedside table. The device receives all types of signals from the system and alerts to whatever is going on. The DS2 provides connectors so you can connect to any of the Signolux receiver alerts. It offers a single piece of equipment for all of your alerting needs; telephone, door, smoke and alarm clock. It provides night time coverage and will alert you to any alerts in the home. It utilises intelligent digital technology, offering a wide range of waking methods. A particularly powerful sound generator with an exceptionally bright row of built-in flashing LED's.

- Large, easily discernible illuminated digits for time and alarm time display
- Unmissable acoustic alarm signal
- The alarm tone pitch and volume are adjustable
- Visual alarm with a row of flashing LEDs
- Snooze-function
- Display brightness adjusts automatically to its

environment

- 12 or 24 hour time display
- Back-up against power failure (4 x AAA batteries not supplied)
- 3.5mm socket for vibrating pad & other alerts

FireAngel®

Wi-Safe[®] 2

HOME SAFETY SOLUTIONS FOR THE HEARING IMPAIRED

WHAT IS THE WI-SAFE2 RANGE?

The new generation of FireAngel Wi-Safe2 interlinked safety products are designed to provide the ultimate in-early warning to escape the dangers of fire and carbon monoxide. They are the ultimate cost-effective solution when it comes to protecting vulnerable groups or homeowners with specific needs from the dangers of fire and carbon monoxide (CO) poisoning. Wi-Safe2 ensures homeowners feel safe from danger and can live independently within their home to improve their quality of life.

HOW DOES THE THE WI-SAFE2 RANGE WORK?

Wi-Safe2 range incorporates heat, smoke, and carbon monoxide alarm detectors, which send wireless signals, not only amongst themselves, but to any combination of Flashing Strobe with Vibrating Pad and / or Loud Low Frequency Sounder. These will alert the homeowner to a potential fire or carbon monoxide incident.

WHO CAN BENEFIT FROM THIS PRODUCT?

The Wi-Safe2 products can be tailored to suit

individual needs thus ideal for everyone, but particularly for people with hearing impairments, and the disabled who may have reduced capacity to be alerted to danger within their home and escape in time.

WIRELESS AND BATTERY-POWERED

Due to their wireless operation, FireAngel's Wi-Safe2 products do not require costly or disruptive wiring in the home. Alarms are battery-operated, and so they are quick and easy to install.

FEATURES:

- Wireless products are quick and easy to install
- Unique coding system to avoid any false alarms from neighbouring properties
- The range can be tailored to suit needs
- Provides early warning to fire/carbon monoxide
- Improves the quality of life of homeowners
- Intelligent technology - creates a network of all the installed units in the home, so they all communicate with each other at all times.
- When ANY alarm detects an emergency or sounds - ALL alarms and receivers will sound and indicate an emergency.
- Intelligent 'locate' feature - on activation, press the test/reset button on any alarm/receiver to silence all but the initiating alarm.

Should a failure of your network occur, then a fault condition will be shown on either the strobe or loud sounder receivers.

RECOMMENDED PRODUCT POSITIONING

SMOKE ALARM

Landing / Hallway, Bedroom, Living Room

Minimum of one alarm should be installed on every floor of your home.

HEAT ALARM

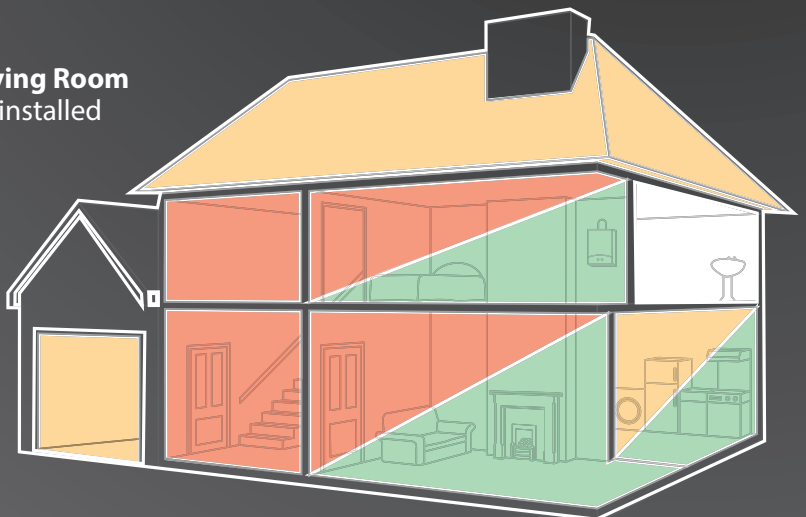

Kitchen, Garage, Loft

CO ALARM

Kitchen, Living Room, Bedroom, Boiler Room

One alarm should be installed in every room containing a fuel-burning appliance.

Wi-Safe2 Strobe & Vibrating Pad Receiver

The combined strobe and pad receiver will respond to all Wi-Safe2 alarms in your network. The strobe will flash and the pad vibrate. The red LED illuminates immediately on activation of an alarm and shows whether the danger is either from fire or CO. The pad can be placed under a pillow or cushion and the strobe laid flat or wall-mounted. The strobe main unit button can be used to test all the alarms in your network - Great for anyone struggling to reach the ceiling. Supplied with mains power supply and a backup battery.

Wi-Safe2 Strobe & Vibrating Pad Receiver W2SVP630

FireAngel Digital CO Detector with Digital Display

The FireAngel FA3322 is a feature-rich carbon monoxide alarm with an advanced digital LCD display, powered by a tamper-proof 10 year lithium battery. An intelligent sensing algorithm is utilised, which increases the sensing rate when a low level of CO is detected, providing a faster response. The alarm's smart multi-function LCD display provides visual instructions for the user. The display illuminates and changes colours depending on the event type (e.g. standby, alarm etc). The FA3322 also includes environmental monitoring features.

PHONES AND ACCESSORIES

CALLERS' VOICE TOO QUIET OR MUFFLED?

Do callers' voices seem very quiet or muffled over the telephone? In this catalogue, you'll find a selection of telephones; some that have been specially designed for people with hearing loss and others that have features that make them suitable for anyone with hearing impairments. Whether you're at home, in the office, or out & about, our selection of desktop (corded), portable (cordless), & mobile phones will suit your needs.

AMPLIFICATION AND TONE CONTROL

All telephones in this catalogue have variable amplification and most have a tone control. A tone control is extremely useful when trying to improve clarity, boost the frequencies that are being lost, and achieve clearer conversations. A mute function allows you to have a private conversation at your end without the person on the phone overhearing your conversation.

CORDED PHONES

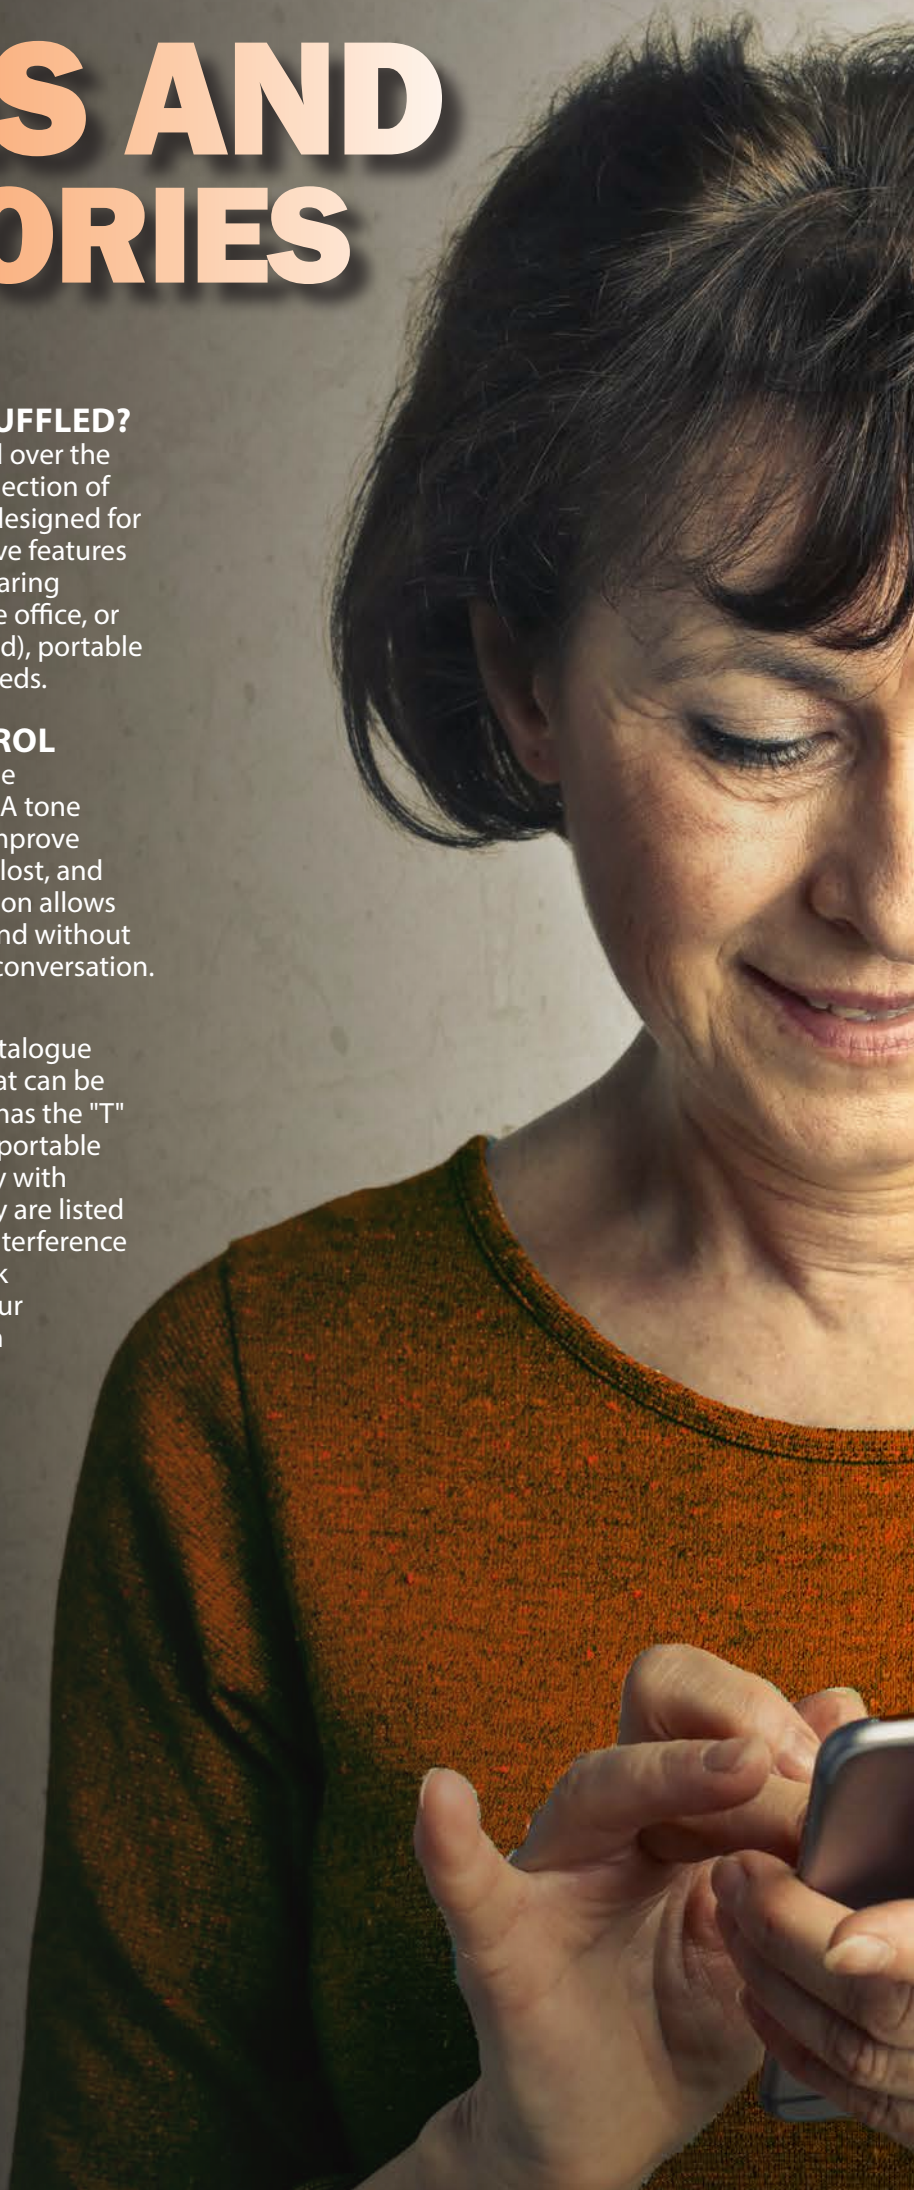

All the landline corded telephones in this catalogue have an inductive coupler in the handset that can be used in conjunction with a hearing aid that has the "T" Loop setting or Loop Program. Some of the portable and mobile phones can also be used directly with hearing aids. If phones have this facility, they are listed as 'Hearing Aid Compatible' (HAC). Should interference be experienced, then a neckloop or ear hook can be used to eliminate the interference. Our Telephone Amplifiers for corded phones can be connected to almost all desktop phones to boost the volume and the tone. These amplifiers can be used at home or in the office.

PORTABLE OR DECT PHONES

Portable or DECT phones allow you the freedom to have a phone anywhere around the house or in the garden. Many have good amplification and tone controls. Some have an answer phone that you can access through the handset and benefit from the amplification. They can be used with hearing aids without interference.

MOBILE PHONES

Our mobile phones are easy to use and are accessible by all, with amplification and hearing aid compatibility as well as a strong vibration. We have mobile phones that are designed specifically for older users, which are simpler and don't have all the bells and whistles of some of the more complicated devices.

MOBILE PHONES

JUST SO YOU KNOW...

SIM CARDS

All our mobiles are unlocked (not linked to any specific network) and can be used with most SIM cards; either Contract or Pay As You Go. SIM cards are not supplied with our phones but are widely available to suit your locality. If you have an existing phone, you may be able to simply swap the SIM into your new phone and keep your old phone number.

BLUETOOTH®

Bluetooth® technology allows connections between different devices without the need for wires, and has a useful range of up to 10m.

HEARING AID COMPATIBILITY

Please remember that some hearing aids are more immune to interference than others. The amount and type of wireless signals transmitted by the phones can significantly vary, making it difficult to state which aids will work with which phones. However, we have found that the newer the hearing aid and the newer the phone, the less likely you are to have problems. You may find that you don't even need to use your "T" Loop setting or Loop Program - simply place the phone speaker as close to the hearing aid microphone as possible. A set of ratings exist to help users find mobile telephones that are suited for use with hearing aids.

M-RATINGS

Wireless devices rated for hearing aids switched to the microphone setting. The higher the number the better the rating. M4 is currently the highest.

T-RATINGS

Wireless devices rated for hearing aids switched to the T/Loop/telecoil setting. The higher the number the better the rating. T4 is currently the highest.

AMPLIFICATION

Manufacturers often quote a dB amplification range for their phones, this is **not** the absolute output of a handset, it is the volume control range of the phone from a level that is not quoted. It is just a guide to output.

DORO MOBILE PHONES

LOOKING FOR AN EASY-TO-USE MOBILE PHONE FOR YOURSELF OR FOR AN ELDERLY RELATIVE?

All our Doro phones are designed with seniors in mind and feature extra loud and clear sound, large separated keys, and a high visual contrast that make them easier to use than other phones.

Many Doro phones also come with a **'Response by Doro'** feature. This unique

service enables trusted relatives or friends to quickly and easily manage important settings on your phone, all via an app installed on theirs.

These services also keep your support network close. Just one press of your phone's assistance button sends an alarm with your location to a list of people you rely on, sounding a loud, distinct signal on their phones even if placed in 'Do not disturb' mode. More peace of mind for you, and for them.

Doro 8100 Smartphone

An easy-to-use smartphone that makes staying connected with family and friends both fun and reassuring. Conversations are clearer with Doro's optimized sound quality, and the intuitive interface simplifies everything you want to do.

- Intuitive menus
- Response by Doro
- Improved sound
- Triple camera
- Water resistant
- Face recognition
- Talk time: 23 hours
- Standby time: 450 hours

PORTABLE DECT PHONES

Notes...

DECT

Digital Enhanced Cordless Telecommunications (Digital European Cordless Telecommunications), usually known by the acronym DECT, is a standard term primarily used for cordless phone systems.

GAP

A GAP (Generic Access Profile) compliant handset from one manufacturer should work, at a basic level, with a GAP-compliant base from another manufacturer, although it may be unable to access advanced features of the base station such as phone book synchronization or remote operation of an answering machine.

SWISSVOICE XTRA CORDLESS PHONES

SWISSVOICE XTRA ARE EASY-TO-USE, AMPLIFIED PHONES.

All Swissvoice phones featured here come with an answering machine and a call-block facility. Ideal for the hard of hearing and visually impaired individuals due to the loud volumes and large bright display. They also come with 4 direct memories function to easily call your favourite correspondents (with pictures on the corded base and A, B, C, D keys on the handset).

ADDITIONAL FEATURES:

- Hearing Aid Compatible (HAC)
- Vocalised handset
- Extra-loud ringer and volume boost
- Powerful ringers can be set up to 90dB
- Amplification of up to +40dB
- Large keypad with talking digits to help avoid dialling errors.
- Add up to 3 additional handsets
- Phonebook - up to 100 contacts

CORDED DESKTOP PHONES

Telephones (Desktop/Corded)

AMPLICOMMS POWERTEL 196

The Amplicomms PowerTel 196 is an extra-loud corded, amplified telephone, designed with hearing impaired and/or elderly people in mind who often need an extra-loud phone to hear conversations clearly. A lot of phones focus solely on volume, quite often at the expense of sound quality. This phone has a volume increase of +60dB but also includes in-built technology that makes sure the reproduced sound is crisp and clear.

- Compatible with hearing aids (HAC)
- Amplification up to +60dB
- Eight handset volume levels can be easily adjusted
- Audio boost key for users with severe hearing loss
- Extra-loud ringer (90dB)
- Extra-bright ring indicator
- Large keys with large easy-to-see numbers
- Built-in tone equaliser with 3 settings
- Visual alert for incoming calls
- Caller ID presentation (CLIP) with capacity to store the last 30 callers
- Telephone book for storing up to 200 numbers
- Redial function for the 10 most recent numbers
- Suitable for both domestic and business use

- Two dedicated speed-dial keys (M1 and M2)
- Four-line extra-large point matrix display screen with blue backlight for easier viewing

Geemarc CL595 Amplified Telephone

The Geemarc CL595 is an extra loud, corded phone with large photo buttons, an SOS function, and an answering machine. It has raised tactile keys, perfect for users with dexterity issues. Fully hearing aid compatible.

- Amplification of up to +50dB
- 4 one-touch memories (with talking caller ID), 3 with pictures
- Speakerphone
- Redial function for last 10 outgoing calls
- Phonebook can store up to 50 names and numbers (4 of which have talking caller ID)
- Mute/Pause function

Geemarc AmpliPower 40

One of the telephones with a high level of amplification, the AmpliPOWER 40 is a similar design to the CL100. It also has a bright flashing call indicator and greater choice of ringer volume and sounds. Designed to help those with considerable hearing loss and visual impairments.

- Amplification of up to +40dB
- Volume boost button
- Tone control for incoming speech with good boost for high frequency loss +/- 10dB
- Inductive coupler for hearing aid users with the "T" loop setting or program
- Hands-free speakerphone
- Ringer volume and tone choice controls
- 12 Number Memory
- Socket (2.5mm) for headset, neckloop, or ear hook use
- Socket for optional vibrating pad

Geemarc AmpliPower 50

Amongst telephones with the highest amplification the AmpliPOWER 50 is similar to the AmpliPOWER 40, but it is the loudest and clearest amplified telephone available, with a maximum 60dB amplification. It is designed to help those with a severe to profound hearing loss. Compatible with all hearing aids that have a telecoil facility.

- Amplification of up to +60dB
- Volume boost button
- Receiving tone control up to 10dB
- Inductive coupler for hearing aid with the "T" loop setting or program
- Hands-free speakerphone
- Bright call indicator light
- Ringer volume and tone choice controls
- Socket (2.5mm) for headset, neckloop, or ear hook
- 12 Number Memory
- Headset and shaker outputs

Geemarc Serenities Telephone

The Geemarc Serenities big button amplified phone is ideal for people with hearing or visual impairment. With amplification up to 30dB and extra bright visual ring indicator. SOS pendant included - it allows the user to call for help with one press of the pendant button, which automatically dials up to 5 emergency contact numbers and plays a personalised voice announcement upon pickup.

- Hearing Aid Compatible (for hearing aids set to the T-setting)
- Amplification of up to +30dB
- Adjustable receiving tone control (4 levels)
- Outgoing speech amplification (-4, 0, & +4dB)
- 5 one-direct memories and 10 priority memories
- Hands-free/speakerphone
- Redial key
- Mute function
- Phonebook (30 numbers)
- Waterproof (IP67) emergency transmitter included (range of 20 to 30m)
- Wristband auto dials up to 5 emergency numbers
- Confirmation tone call

PHONE ACCESSORIES

PhonePlus Telephone Handset

A battery-operated telephone amplifier for most desktop, corded handset telephones, which works by increasing the volume of the caller's voice through their handset, while boosting high/low tones if needed. Simply disconnect the handset from the phone base and connect the PhonePlus. Features LED Indicator and Tone Control.

Note: Not suitable for use with cordless, mobile or telephones with buttons in the handset, & not ideal for already highly amplified phones.

- Volume control range of up to 40dB with boost button
- Volume control range of +/- 10dB
- Socket for optional headset, neckloop, or ear hook
- Battery powered; 2 alkaline AA supplied, approx life 2 years
- 20cm connection lead for phone comes supplied

Sound Oasis Bluetooth Speaker BST-100

Sleep soundly with any one of the 10 built-in sounds to help relieve tinnitus and to provide a calming background noise for relaxation and contemplation. With Bluetooth capabilities, this speaker gives the option to connect to a mobile phone or computer wirelessly and stream additional sounds, music, or even an audio book.

- Perfect for improving sleep, blocking noise, managing tinnitus, and calming babies.
- Pre-loaded microSD card with 10 superior quality 'Sound Oasis' sounds.
- Your selected sound plays seamlessly for 8 hours.
- Exceptional big bass sound, but super compact size is perfect for use at home or while travelling.
- Stream new sounds or music from any Bluetooth-enabled device for exceptional versatility. Alternatively you can connect your audio device (MP3 player, CD player, mobile phone etc) via an auxiliary cable (not supplied).
- Insert a new microSD card with 'Sound Oasis' sounds for unlimited sound library expansion.
- 30'/10m Bluetooth wireless range.
- Built-in rechargeable lithium battery allows for 5 - 8 hours of cordless use on one charge.

Sound Oasis Stereo Pillow Speakers SP101

Order code **258-120**
Price **£20.39 Inc. Vat**
Colour **White**
Size **126x63x20mm**

Sound Oasis Stereo Pillow Speakers SP101

A pair of small stereo pillow speakers with handy in-line volume control from Sound Oasis.

The low profile pillow speakers simply slip under your pillow to allow you to listen to any radio, CD, or cassette player, etc., that has a 3.5mm stereo speaker/headphone socket. They are wired together so you don't lose one, but you are still able arrange them comfortably under your pillow.

Use with Sound Oasis Sound Relaxers, CD players, iPods, iPhones, iPads, most MP3 players, and TVs.

- Two ultra-thin speakers for comfortable use
- In-line volume control for effortless volume control.
- High quality stereo sound
- Speaker output: 4 ohm, 2-watt speakers
- Speaker Jack: 1/8" (3.5 mm) plug fits most electronic devices including Sound Oasis Sound Therapy Systems, iPods/MP3 players, CD players, TVs, etc

COMMERCIAL AUDIO

IMPROVING COMMUNICATION FOR THE HEARING IMPAIRED

We can work with you to improve communication for hearing impaired people throughout various, non-domestic environments.

We offer systems that meet the continually varying needs of customers to be compliant with current legislation in order to provide quality audio services for providers, clients and users.

APPLICATIONS

- Reception areas
- Conference and meeting rooms
- Courtrooms
- Lecture theatres
- Churches
- Multilingual simultaneous translation
- Tour guides
- Auditoriums
- Multimedia rooms and theatres

BESPOKE SERVICE

We can specify and design a bespoke system that fits your type of building and its requirements. Through our Loop System Design package, we can deliver a full supply, install, and provide an after-care package. We can work with you to improve communication for hearing impaired people throughout various community settings.

BENEFITS OF LARGE AREA LISTENING

The main advantage for all systems is that the sound is delivered to the listeners in a pure, undistorted form that is not influenced by the distance between the listeners and the sound source, or by any annoying background noise in the room.

LETS GET IT RIGHT

In order to find the right listening system for your needs, it is important to compare the requirements of the venue and its architectural features to ensure that the properties of the chosen transmission system is not in conflict with its surroundings. Frequent site visits and

assessments are an important part of any pre-installation for a new or upgrading venue.

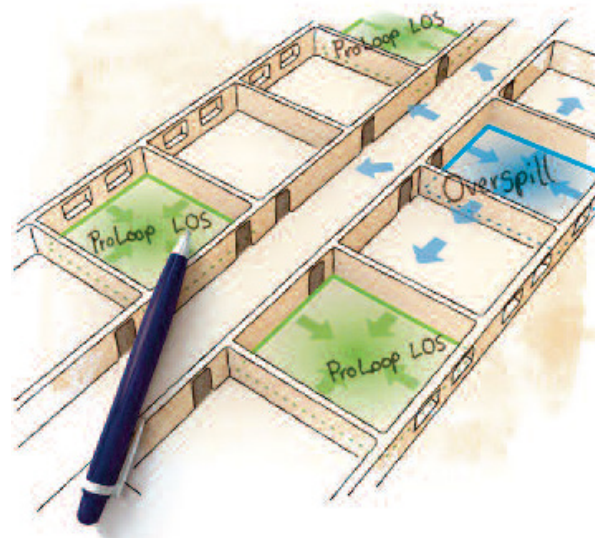

The key to all these transmission systems is their input from an audio source, such as the microphone; one or many, or a public address system. If the quality of the input is not at its best, then the output will not be satisfactory.

HOW THE SYSTEMS WORK

An induction loop system consists of a loop of insulated wire (the loop) that runs around the required listening area, an amplifier and microphone, or other input. The amplifier transmits the required audio signals as an alternating current into the loop. A magnetic field of audio sound is then created inside the loop, allowing listeners with the "T" loop setting or loop program on their hearing aids, to move freely around the room and receive the audio signals directly into their hearing aids without unwanted sounds.

INSTALLATIONS

Please contact us if you have a project in mind and would like further information or help with a system, system design, installation, commissioning, and training.

LA90 PORTABLE INDUCTION LOOP SYSTEMS

The LA90 Portable Loop Systems provide a convenient solution for hearing aid users to listen more easily to conversation in noisy situations via the "T" Loop setting or Loop Program of their hearing aid. Used in reception areas, meeting rooms, interviews, checkouts, etc. for a 1:1 conversation when in noisy areas or where discretion is required.

A built-in microphone within the unit picks the sound up of the person speaking and transmits a loop signal to the hearing aid user. The speaker and hearing aid user must be within approximately 1m(3ft) of the unit. The hearing aid user will see a confidence light on the front of the unit to show them the system is operating, while the speaker will see an indication of their voice being transmitted. The Loop System transmits a signal both ways so both individuals can receive the signal equally well.

In a group setting, the system can be placed flat on a table, by the separate microphone, in front of the speaker. Assists with DDA compliance.

LA90 Desktop Loop System

This system can be used with an external desktop microphone to enhance a person's speech. It also sends signals directly to the hearing aids & gives more discretion.

LA90 Desktop Loop System	
Includes: LA90 Loop System, Desktop Microphone, Handset	
Order code	137-102
Price	£190.90 Ex. Vat £229.08 Inc. Vat

PROLOOP SYSTEMS

The ProLoop Amplifier family is designed for professional use, covering any room from small to very large, giving reliable dependable use where its most required.

ProLoop systems incorporate Automatic Gain Control (AGC), which guarantees consistent field strength and reproduces stable sound with a special emphasis on clear speech, even under acoustically demanding conditions. Corresponding test equipment can be used to evaluate the sound quality via the integrated monitor out jack. With the ProLoop systems, you'll receive high availability, operating reliability, and quality assurance.

The **ProLoop NX3** and **NX7** systems are primarily designed for continuous use. The integrated switch mode power supply and the Class-D amplifier design enable high efficiency and low waste heat. Among other things, this results in high reliability and operational safety. The function of the induction loop and the amplifier is continuously monitored. A functional error is indicated via displays on the unit and at the error output. Both systems incorporate Automatic Gain Control (AGC) and Metal Loss Correction (MLC), which can be used to correct the frequency response when affected by metal structures present in the building.

ProLoop C (170m2)

The ProLoop is a switch-able, 100% short-circuit-proof amplifier, with two symmetrical XLR input jacks, and an extremely stable (4 A RMS) output performance.

- Automatic fuse reset & extra-sturdy jacks
- 1x RCA input jack & 1x Line output jack
- Dual action AGC for excellent speech recognition
- Convenient monitoring of the magnetic field (can be done using headphones or speakers)
- Treble control to compensate for treble losses due to reinforcement

ProLoop C (170m2)

Order code	230-200	Colour	Black
Price	£335.88 Inc. Vat	Size	64x295x205mm

ProLoop NX3

- Designed for small-sized rooms (up to 56m²).
- The balanced input 1 can be switched between microphone & line sensitivity, & provides 48V phantom power for condenser microphones
- The unbalanced Input 2 handles line level signals or the audio signal of an electret microphone
- Input 3 is designed for connecting media players via a 3.5mm stereo jack. Stereo signals are summed to mono.

ProLoop NX3

Order code	230-209	Colour	Black
Price	£238.80 Inc. Vat	Size	32x167x95mm

ProLoop NX7

- 7A RMS Output Current
- Link connections allow several PROLOOP NX Amplifiers to be combined into one unit
- The output signal can be monitored via a headphone output
- A screw-fixed cover plate prevents settings from changing
- The power switch on the back prevents the unit from being switched off unintentionally

ProLoop NX7

Order code	230-213	Colour	Black
Price	£838.80 Inc. Vat	Size	43 x430x290mm

ACCESSORIES FOR COMMERCIAL AUDIO

Crescendo 60/2 System

A system which can be used as a personal listener as well as to listen to, or monitor existing loop systems. Supplied with Under-chin Stethoscope Headset, Plug-in Microphone, External Microphone (1.2m lead), 3m Extension Lead, and 2 x AA batteries.

Crescendo 60/2 system

Order code	109-102	Colour	White/Grey

ProLoop Field Strength Meter Plus

The Proloop Field Strength Meter (FSM) Plus measures the magnetic field strength of induction loop systems according to IEC 60118-4:2006 and BS 6083, Para. 4. The device is designed for professional use and delivers reliable RMS values (RMS-measuring range calibrated to 400mA/m = 0dB) on the output level, response frequency, AGC function, distortion and background noise in the tested induction loop. In addition, it enables the user to make an acoustic evaluation of the sound via earphones. It offers adjustment possibilities for test ranges of background noise and field strength, and multi-coloured LEDs for excellent legibility.

ProLoop Field Strength Meter Plus

Order code	230-211	Colour	Grey
Price	£130.79 Inc. Vat	Size	83x36x125mm

- LED-scale with 3dB resolution
- Handy, lightweight, rugged chassis
- Switch-able A weighted filter
- Uses two 1.5V AA batteries & has 3.5mm stereo headphone jack with volume control

Ordering Information

ORDERING INFORMATION

You can view and order all of our products online at www.sarabec.com 24 hours a day 7 days a week. We use a secure ordering system to ensure the safety of your details.

If you wish to place your order by post or fax, simply tear out the order form overleaf and complete it with the details (product code, price, and quantity) of the products you require.

- If you are eligible for VAT relief, then, for each product required, you only pay the Excluding VAT price - You will need to complete the VAT Relief Certificate on the back of the order form.
- If a VAT exclusive price is not quoted for the product then the price including VAT must be paid.
- If paying by VISA, Mastercard, Maestro or AMEX Please complete the credit/debit card payment details.
- Post or fax your order to us.
- If paying by cheque, make it payable to 'Sarabec Ltd'. Enclose your payment with this order and post to us. Please note that cheques are cleared before goods are sent.

VAT

Throughout this catalogue you will find products that are priced Inclusive (Inc. VAT) and Exclusive (Ex. VAT) of VAT. VAT relief is not available on postage and packing.

If, in the description of each product we have detailed prices for both 'Including' and 'Excluding' VAT, that product is eligible for VAT relief. If an exclusive price is not shown, VAT relief is not available.

You are entitled to VAT relief if you are handicapped by a hearing disability. To benefit, simply complete the VAT Relief Certificate included in this catalogue. If you are unable to make this declaration, you must include the VAT in your order.

PAYMENT

You can pay by using a cheque or postal order payable to SARABEC Ltd or by using a credit card or debit card. If you wish to use a credit or debit card you may place your order and pay online via secure payment services or direct by telephone, fax or textphone.

TRIAL PERIOD

All products carry a one month trial period if purchased within the United Kingdom. You may return your products to us for any reason within one month of receipt and obtain a refund for your purchase provided that:

- You contact us first to let us know why you are returning the product
- The products are returned in good condition and in their original packaging; we may charge if products have been misused.
- The products have been used in accordance with the product instructions.

The cost of returning any product is your responsibility. We cannot accept responsibility for loss or damage to goods until they arrive safely at our offices. We advise you to return goods adequately packed and covered by insurance where appropriate.

DELIVERY

Products are normally available from stock and are despatched within 48 hours of receipt of your order. Delivery to UK mainland addresses normally takes up to **3 working days** from receipt of your order by us. Delivery is made through Royal Mail or independent carriers. A signature may be required on delivery of the product. Our delivery charges are for all UK mainland addresses, except the Channel Islands. For addresses outside this area please ask for delivery costs before ordering.

FURTHER INFORMATION

Some products in this catalogue may not be available for the whole life of the catalogue.

All personal information entered on the Order or VAT Relief forms will be treated as confidential as detailed in our Privacy Policy. You can ask for a copy of the Privacy Policy or obtain one from our website.

Our normal hours of business are: 8.15am to 4.45pm - Monday to Thursday, 8.15am to 4.00pm Friday.

Our Agreement With You

PRICES

Whilst we do our best to keep any price rises to a minimum, we reserve the right to increase our prices at any time. Should we do so, we will contact you on receipt of your order with details of the increase giving you the opportunity to cancel your order if you wish.

Should your payment not clear, then we may, in addition to any other rights we may have:

- Suspend delivery of the product ordered or any part of them until we receive cleared funds.
- Legally recover those products already delivered to you from you or your premises at any reasonable time and retain ownership.
- Pass on to you any charges we incur in obtaining clearance of your payment.

You will not own the products until your payment for them has cleared.

VAT

VAT is calculated at the prevailing rate at date of invoice. Should the prevailing rate of VAT change from that used in our publications, calculations will be based on new rates and charged to you accordingly.

DELIVERY

Delivery to UK addresses normally takes 3 working days from the date of despatch of your order by us. It is made through independent carriers. The independent carrier may require a signature from you on receipt of your order.

If you do not receive your order within 28 days of placing your order or should your order arrive damaged, please contact us as soon as reasonably practicable. Please retain the original packaging.

Additional postage charges may be payable for deliveries to non-UK addresses; please contact us for further details.

GUARANTEE

All our products are covered by our guarantee. You will invalidate the guarantee if:

- You use the products contrary to instructions supplied with them
- You cause any damage to the products through

misuse or negligent use of them.

- If any product becomes damaged outside normal usage.
- For any consumables such as batteries.

If you wish to rely on this guarantee, we will, at our choice, either repair or replace the products or, if appropriate, any parts of them. If we are unable to carry out any of the above through no fault of our own we will refund the price you paid for the products.

In all circumstances, except for faulty goods, this guarantee shall not exceed the price you paid for the products in question. No other remedies are available.

OUR PRODUCTS

Full descriptions of our products are given in our current catalogue or online.

The products are only suitable for the intended uses described.

As a part of our continuing programme of product development, we reserve the right to improve and update product designs.

CANCELLATION

You may cancel your order anytime from when you place the order up to 10 working days after the date you received the goods but, to do so, you must notify us. We will respond confirming your cancellation and the date your notification was received. The date confirmed is the date the cancellation came into effect.

UNFORESEEABLE PROBLEMS

We are not responsible for delays outside our control (for example industrial dispute, act of God, inability to obtain raw materials) if this prevents or hinders our contract with you.

OUR AGREEMENT

An agreement is made between us once we have received and accepted your order.

Our agreement and any related matters are governed by English law. Your statutory rights are not affected. This agreement is a summary of our full Terms and Conditions of Sale and Supply; you can ask for a copy or obtain one from our website.

June 2018
